ACKNOWLEDGEMENT

We take this opportunity to express our deep gratitude and whole hearted thanks to project guide Prof. Pravin Yadao, Coordinator for his guidance throughout this work. We are very much thankful to him for his constant encouragement, support and kindness.

We are also grateful to our teachers Prof. Rahul Tiwari, Prof. Sushma Gawande, Prof. Preeti Rangari, Prof. Prajka Deshpande and Prof. Haresh Naringe for their encouragement, help and support from time to time.

We also wish to express our sincere thanks to Principal Dr. N. Y. Khandait for providing us wide range of opportunities, facilities and inspiration to gather professional knowledge and material without which this project could not have been completed.

INTRODUCTION

INTRODUCTION

“Fashion Trends” is an website which will help people to change their lifestyle in a positive manner .As we see the first impression is very impotant to create a good impression on another person. Our website is meant to help people change their day to day lifestyle with the help of different guidelines of Fashion. Exercise ,fashion looks and many more provided by us. In this website we focus on your outer look about the clothes and your fashion. Fashion is really an important part of your life it could be done to look good and present yourself perfect in front of everyone.

With the help of our product section you can find the different types of clothes for male and female both..

In our home section we provide the beautiful treandy fashion looks that may help while buying the good product for you. As you always have to look good because most of people want a trendy look.

OBJECTIVES

OBJECTIVES

Creativity:

Creativity is the base of any fashion company. The designer, or design team must work to develop a fresh perspective on fashion with each new line. They must also know how to make their ideas into a reality, without losing sight of the concept in the process.

Client Relations:

Maintaining strong relationships with clients is the key to any company's survival. Designers must work to keep clients up to date with new styles, and occasionally even offer perks for their support.

Quality:

Ensuring that designs are produced at top quality, helps to seal the company's popularity and staying power.

Cost:

Make it affordable. A big part of the design process is the factor of cost. How much is it going to cost for you is really important part.

To provide free of cost:

Our website is an type of non-commercial website. As our main motive objective is to promote fitness and a healthy lifestyle rather then earning money.

Promote fashion:

In this new world it is really important for all of us to follow a right fashion in the society.

PRELIMINARY SYSTEM ANALYSIS

NEED OF NEW SYSTEM

We can say that a website is also a system.Hence here we need to identify the first step of SDLC and that is to analyses the need of a new system . The need of the new system arises when there are flaws and problems in the old system. Due to which the work that needed to be done by the system ,for which the system is developed, is not being executed in the desired manner ,or the old system is taking a long duration of time to complete a task, due to which the work is getting delayed. The possibilitycan also be, that the technology that the old system is using is outdated. As a result of which the need of a new and a better system has arisen.

Given below are the need of new system:-

- 1)No need to switch:-** In the new system we have most of the fashion related activities at one place. Such as product showing , Motivating etc. So there is no need to go to other website for searching different product
- 2)Easy to use:-**In this system the look is very attractive and easy to understand the working of the website.
- 3)Low Maintebnance:-**This website is not an commercial website and Moreover it does not require any updates ,we have tried our level best to keep the bugs and errors away while coding ,which makes it very efficient and flexible to use.
- 4)Time saver:-**Our website is an time saver as it guides you efficiently so that there is no scope of any confusion.

FLAWS IN PRESENT SYSTEM

No system can be said as “PERFECT SYSTEM” as there has to be some or the other flaws in the system. As far as our website that is our system is concerned we will leave no stone unturned as will try our level best to correct the flaws in our system.

Flaws present as follows:-

- 1)No Updates:-** Our website does not support any updates as this is an typical informative website in nature.
- 2)Display:-**Our website can only be displayed on computers and laptops as it is developed in that manner.
- 3)Without any club:-** This website does not comes under or is a part of any fitness club .It is one of its kind but we can say that in future it is possible to make it a part of an fitness community so that more efficiently the website can help people to construct an healthy and a happy go lucky lifestyle.
- 4) Limited products:-** As there are tremendous types of fashionable product as a result of which we have provided only the essential one.

FEASIBILITY STUDY

Feasibility study is test of system proposal according to its workability, impact on the users, ability to meet the user's need and to meet the objective for which it is developed. In the feasibility study the cost and the benefits are also estimated with greater accuracy.

Types of feasibility to take care of:

Technical Feasibility:-

As we have developed an informative website as a result of which it runs on any computer or laptop, as we only need the browser support to run it. such as Internet Explorer, Chrome, Mozilla Firefox.

Economic Feasibility:-

As our website is provided made available for free to the users due to which it very feasible for everyone to use it this is because the aim of our website is to promote fitness nothing else.

Social Feasibility:-

Our website content and the features are beneficial for the society as the visit to our website will help to promote an healthy and a fit life and will help people of the society to overcome loneliness depression and help people who are facing the problem of panic attacks with the help of our meditation guide, and also help to refresh their mood as well as to meditate more efficiently and effectively due to the background music made available to you.

Operational Feasibility:-

Managers develop the software according to our customer's requirements.

Managers create projects based on customer's requirements and standards.

Project Category

Platform/Language/Tool Used:

- Front End- HTML, CSS, Javascript
- Back End- PHP, MYSQL

HTML

- HTML stands for Hyper Text Markup Language
- HTML is the standard markup language for creating Web pages
- HTML describes the structure of a Web page
- HTML consists of a series of elements
- HTML elements tell the browser how to display the content
- HTML elements label pieces of content such as "this is a heading", "this is a paragraph", "this is a link", etc.

HTML TAGS-

- The <!DOCTYPE html> declaration defines that this document is an HTML document
- The <html> element is the root element of an HTML page
- The <head> element contains meta information about the HTML page
- The <title> element specifies a title for the HTML page (which is shown in the browser's title bar or in the page's tab)
- The <body> element defines the document's body, and is a container for all the visible contents, such as headings, paragraphs, images, hyperlinks, tables, lists, etc.
- The <h1> element defines a large heading

- The <p> element defines a paragraph

Web Page: A web page is a document which is commonly written in HTML and translated by a web browser. A web page can be identified by entering an URL. A Web page can be of the static or dynamic type. With the help of HTML only, we can create static web pages.

Hence, HTML is a markup language which is used for creating attractive web pages with the help of styling, and which looks in a nice format on a web browser. An HTML document is made of many HTML tags and each HTML tag contains different content.

Cascading Style Sheets (CSS)

- CSS stands for Cascading Style Sheets
- CSS describes how HTML elements are to be displayed on screen, paper, or in other media
- CSS saves a lot of work. It can control the layout of multiple web pages all at once
- External style sheets are stored in CSS files

CSS (Cascading Style Sheets) is used to style and layout web pages — for example, to alter the font, color, size, and spacing of your content, split it into multiple columns, or add animations and other decorative features.

Advantages of CSS-

Separation of content from presentation

CSS facilitates publication of content in multiple presentation formats based on nominal parameters. Nominal parameters include explicit user preferences, different web browsers, the type of device being used to view the content (a desktop computer or mobile device), the geographic location of the user and many other variables.

Site-wide consistency

When CSS is used effectively, in terms of inheritance and "cascading", a global style sheet can be used to affect and style elements site-wide. If the situation arises that the styling of the elements should be changed or adjusted, these changes can be made by editing rules in the global style sheet. Before CSS, this sort of maintenance was more difficult, expensive and time-consuming.

Bandwidth

A stylesheet, internal or external, specifies the style once for a range of HTML elements selected by class, type or relationship to others. This is much more efficient than repeating style information inline for each occurrence of the element. An external stylesheet is usually stored in the browser cache, and can therefore be used on multiple pages without being reloaded, further reducing data transfer over a network.

Page reformatting

With a simple change of one line, a different style sheet can be used for the same page. This has advantages for accessibility, as well as providing the ability to tailor a page or site to different target devices. Furthermore, devices not able to understand the styling still display the content.

Accessibility

Without CSS, web designers must typically lay out their pages with techniques such as HTML tables that hinder accessibility for vision-impaired users.

MySQL

MySQL is a fast, easy-to-use RDBMS being used for many small and big businesses. MySQL is developed, marketed and supported by MySQL AB, which is a Swedish company.

MySQL is the world's most popular open source database. With its proven performance, reliability and ease-of-use, MySQL has become the leading database choice for web-based applications, used by high profile web properties including Facebook, Twitter, YouTube, Yahoo! and many more.

HARDWARE AND SOFTWARE REQUIREMENT

HARDWARE AND SOFTWARE REQUIREMENT

To run our website following hardware will be required.

1. Software Required: -

Microsoft Window **7/8/10**

Internet Explorer/Chrome

Notepad

2. Hardware Required:-

To run our website following software will be required.

Ram:512 MB

Processor:1.83 GHz

HDD:500mb

Basic:Vedio card

Activate Windows Go to Settings to activate Windows.

The screenshot shows a web browser window with multiple tabs open, including WhatsApp, Downloads, Ecommerce PHP Admin Panel, New Tab, localhost / 127.0, and Ecommerce PHP. The main content area displays a shopping page for 'THE FASHION trends' website.

The header includes a navigation bar with links for Register, Sign In, and a shopping cart icon showing 0 items. Below the header is a menu bar with categories: MENS, WOMENS, SHOP, LOCAL STORES, and MY ACCOUNT.

The main banner features a city skyline background with the text 'SHOP AT AVE' overlaid. Below the banner is a search bar labeled 'Type here to search' and a toolbar with various icons.

The left sidebar contains two sections: 'Manufacturers' and 'Categories'. The 'Manufacturers' section has a 'Filter Manufacturers' search bar. The 'Categories' section includes a 'SNEAKERS' category (selected) and other options like COATS, T-SHIRTS, SWEATER, and TROUSERS. The 'Categories' section also lists 'OTHERS', 'MEN' (selected), 'FEMININE', and 'KIDS'.

The main content area displays three product cards:

- SNEAKERS**: Adidas Ultraboost 21 PrimeBlue Shoes, \$150. Buttons: View details, Add To Cart.
- COATS**: Polo Long Sleeves Polo Shirt for Men, \$50-\$35. Buttons: View details, Add To Cart.
- TROUSERS**: Philip Plein Sleeveless Flaux Fur Hybrid Coat, \$245. Buttons: View details, Add To Cart.

Pagination at the bottom indicates there are 2 pages. A watermark 'Activate Windows Go to Settings to activate Windows.' is visible in the background of the products.

The image displays two screenshots of a web application interface, likely for an e-commerce platform, running on a local server (localhost).

Customer Registration Page:

- The title bar shows multiple tabs: WhatsApp, Downloads, Ecommerce PHP, Admin Panel, New Tab, localhost / 127.0, and Ecommerce PHP.
- The main header features a city skyline background with the text "REGISTER AT AVE" in white.
- The form is titled "Register A New Account" and includes fields for Customer Name, Customer Email (jelamk1999@gmail.com), Customer Password, Confirm Password, Customer Country, Customer City, and Customer Contact.
- A watermark "Activate Windows Go to Settings to activate Windows." is visible on the right.
- The taskbar at the bottom shows various pinned icons and the date/time: 14:10 06-05-2022.

Admin Dashboard:

- The title bar shows multiple tabs: WhatsApp, Downloads, Ecommerce PHP, Admin Panel, New Tab, localhost / 127.0, Admin Panel, and Admin Panel.
- The left sidebar menu includes: Dashboard, Products, Bundles, Assign Products To Bundles Relations, Manufacturers, Products Categories, Categories, Stores, Contact Us Section, Edit About Us Page, Coupons, Terms, View Customers, View Orders, and View Payments.
- The main dashboard area has four cards: Products (7), Customers (6), Products Categories (6), and Orders (11).
- The "New Orders" section lists five recent orders with details like Order #, Customer, Invoice No, Product ID, Qty, Size, and Status.
- A watermark "Activate Windows Go to Settings to activate Windows." is visible at the bottom.
- The taskbar at the bottom shows various pinned icons and the date/time: 14:11 06-05-2022.

The screenshot shows a web browser window with multiple tabs open. The active tab displays a shopping cart interface titled "SHOP CART" over a city skyline background. The page includes a "Shopping Cart" section with a message about having 0 items, a table for adding products, and a coupon code input field. It also features "Order Summary" and "Continue Shopping" buttons. The browser's taskbar at the bottom shows various pinned icons.

The screenshot shows a web browser window with multiple tabs open. The active tab displays a customer account page titled "localhost/zz/customer/my_account.php?pay_offline". The page includes a sidebar with options like "My Orders", "Pay Offline" (which is highlighted in blue), "Edit Account", "Change Password", "My WishList", and "Delete Account". The main content area shows "Bank Account Details", "UBL OmniMobi Cash Details:", and "Western Union Details:" sections. A photograph of a person standing outdoors is displayed on the left. The browser's taskbar at the bottom shows various pinned icons.

TESTING AND VALIDATION CHECK

TESTING

Testing is an vital for the success of any system. System testing makes a logical assumption that if allthe parts of the system are correct the goal will be successfully achieved. This is very important because an inadequate testing or non-testing leads to an error in the system

Certain type of testing involve here are

- 1. Volume Testing:-**We create as many records as would normally be produced to verify that the hardware and the software is working correctly or not.
- 2. Code Testing:-**Here code of system is checked and the testers ensure that there are no bugs or errors especially syntax error ,logical error with this,they also test the connectivity of the system.
- 3. Usability Testing:-**The useable test, verifies the user-friendly nature of the system. This includes the normal testing of the normal operating of the system and error-handling procedures.
- 4. Stress Testing:** To find out how much load can system handle.

VALIDATION CHECK:

This is an process of putting restrictions in the system so that no error can be generated and the data that is the input can be maintained properly. This is used mainly in the forms. Such as if I have putted an validation such as my textbox of phone number,will accept only number then it will not accept any input rather then number ,so in such case if an user enters a string then an errore may display.

Validation check as follows

1. Only Characters:This is used to insert only characters.
2. Only Numbers: In this Validation, only numbers are allowed.
3. Character Length: In this validation, only the predefined length of characters can be inputted.
4. Required fields should not be blank: In this validation,nofield should be unfilled in the form.
5. E-mail check: In this validation, entered e-mail is checked.

IMPLEMENTATION, EVOLUATION, AND MAINAINANCE

IMPLEMENTATION

System implementation constructs the new information system and puts it into operation. It is during system implementation that any new hardware and software are installed and tested. As a system components are constructed or installed they must be individually tested. and the complete system must also be tested to ensure that it works properly

EVOLUSION

In this the scope of evolution very vast.

The evolution can be as follos:-

- 1)It can be used by any fashion website
- 2)Membership facility for the users can aslo be provided
- 3)More types product and facility

MAINTANANCE

There are most of the chances that the system may show bugs at the time of maintenance. And mainly they only types of errors that occurs are logic errors system operational errors, user errors etc.

FUTURE SCOPE

The future scope of the website is a very important aspect, as it will decide what modifications and alterations are possible in future to make a website more dynamic and responsive in nature.

It can be used as an official website of a fashion and under which subscription and membership services can also be provided to the visitors. Moreover it can also be converted into a responsive website too.

Ecommerce facility also be provided. We can also provide Google map services that will give the information to the visitors regarding the nearby shops etc. We can also provide information regarding different fashion trend in other product also.

Many more types of features should be added in this website direct contact to manufacturer so wholeseller also order the bulk of clothes and sell in the market .Even you can contact to big branded companies for window showing on our website

CONCLUSION

Most of the things are provided at one place ,that is our website which is totally enough to change your lifestyle completely. This is an very interesting and an website with attractive interface which is easy to use. Our website have sections such as home categories,product etc. We have provided demonstration through gifs so that it can be easily understood.

For your conveniences we have provided many a pictures, so that our buying plans are easily adaptable in nature. Moreover the website that we have provided is very easy to do at anyplace such as gardens, office, home and anywhere you want to buy.

We have not only provided a guide of purchasing clothes and a platform with the help of which you can really do shopping on our website but also we have demonstrated the meaning of that particular style dress and how it is done and what is its importance and in what manner it affects our lifestyle and our daily life. To increase your

Comfort an cash on delivery is provided to you so anyone can buy easily from our website. To let you know about the importance of trend we have also made you aware regarding why we do latest fashion about clothes.

This website will really be an helping hand cause of an proper illustration provided by us.

BIBLIOGRAPHY

For completion of our website we have taken reference from several source listed below.

- 1) www.w3school.com
- 2) www.youtube.com
- 3) Ecommerce website
