

**A
PROJECT
ON**

“Khadi Udyog”

Submitted to

**Rashtrasant Tukadoji Maharaj Nagpur University,
NAGPUR**

In the Partial Fulfillment of

B.Com. (Computer Application) Final Year

Submitted by

Aastha Tyagi
Kanak Sinha

Under the Guidance of

Pravin J. Yadao

**G. S. College of Commerce & Economics
Nagpur
2019-2020**

G. S. COLLEGE OF COMMERCE & ECONOMICS

NAGPUR

CERTIFICATE

(2019 - 2020)

This is to certify that Mr. /Miss **Aastha Tyagi and Kanak Sinha** has completed their project on the topic of **Khadi Udyog** prescribed by the Rashtrasant Tukadoji Maharaj Nagpur University for B.Com. (Computer Application) - III course in G. S. College of Commerce & Economics, Nagpur.

Date:

Place: Nagpur

Internal Examiner

ACKNOWLEDGEMENT

We take this opportunity to express our deep gratitude and whole hearted thanks to project guide Prof. Pravin Yadao, Coordinator for his guidance throughout this work. We are very much thankful to him for his constant encouragement, support and kindness.

We are also grateful to our teachers Prof. Rahul Tiwari, Prof. Sushma Gawande, Prof. Preeti Rangari, Prof. Prajкта Deshpande and Prof. Haresh Naringe for their encouragement, help and support from time to time.

We also wish to express our sincere thanks to Principal Dr. N. Y. Khandait for providing us wide range of opportunities, facilities and inspiration to gather professional knowledge and material without which this project could not have been completed.

Aastha Tyagi

Kanak Sinha

Date:

Place: Nagpur

DECLARATION

We **Aastha Tyagi & Kanak Sinha** hereby honestly declare that the work entitled “**KHADI UDYOG**” submitted by us at G.S. College of Commerce & Economics, Nagpur in partial fulfillment of requirement for the award of B.Com. (Computer Application) degree by Rashtrasant Tukadoji Maharaj, Nagpur University, Nagpur has not been submitted elsewhere for the award of any degree, during the academic session 2019-2020.

The project has been developed and completed by us independently under the supervision of the subject teacher and project guide.

Aastha Tyagi

Kanak Sinha

Date:

Place: Nagpur

INTRODUCTION

INTRODUCTION

The success of the present system depends largely on the how accurately the problem is defined, theory investigated and properly carried out through the choice of the solution. Online shopping is a great move towards digitalization. Everyone can buy or sell the things in an easier way. Online shopping plays a crucial role in every individual's life who go for it. There are many companies or e-commerce websites who sell their products online. It is very good to move towards technicalities in terms of business or other related stuff. Online shopping is a incredible platform to showcase your enthusiasm and skills in a proficient way.

Now a days online shopping is growing rapidly among people. Online shopping has so many benefits like mainly it saves our valuable time. We can do online shopping anywhere and anytime without going outside just using our phones, laptops, PC(s), computers etc. It is the best approach in today's life. It makes our shopping easy we don't need to go market and also we can find a product of interest by visiting of the retailer directly or by searching among alternative vendors using a shopping search engine, which display the same product's availability and pricing at different e-retailers

Khadi over the decades has moved from a freedom fighter's identity fabric to a fashion garment. At one time it was scorned as fabric for the farmer and the rural wearer. Today there is such an increasing demand for ***khadi*** is such an increasing demand for *khadi* cloth that despite the million workers all over the country involved in spinning it they are unable to meet the demands of the market.

- **What is Khadi?**

Khadi is also known as ***khaddar***. It is usually referred to a rough textured fabric. Weavers prefer the yarn produced by Mills because it is more robust and of consistent quality. is a hand-woven natural fiber cloth originating from eastern regions of the Indian subcontinent, mainly Eastern India, Northeastern India and Bangladesh, but are now broadly used in Pakistan and throughout India. This fabric is made mainly of cotton .The cloth is usually woven from cotton and may also include silk or wool, which are all spun into yarn on a spinning wheel called a ***charkha***. It is a versatile fabric, cool in summer and warm in winter. In order to improve the look, ***khadi/khaddar*** is sometimes starched to give it a stiffer feel.

The rediscovery of the charkha has brought in a new economic thinking for Indians. It has given new life to the individual made him more resourceful and self dependent. Making ***khadi*** a true start of democracy in the true sense. ***Khadi***, however, can no longer be sold on an emotional level. A new approach has to be adopted for the new generation who are unaware of its original implications. It will be worthwhile for the young and trendy generations of the 90s to discover the beauty of khadi and support is as a fabric of our tradition.

Since *Khadi* is woven by hand in villages it is often difficult to provide large quantities of the fabric at short notice. Yet it is this handmade quality of the fabric with its inherent defects that is the beauty of *Khadi* and that is what the buyer wants at times.

This encourages us to develop a website where we sell khadi clothes and brings back khadi in a modern way.

OBJECTIVES

OBJECTIVES

1) Increase revenue: The primary goal of any marketing strategy is ultimately to increase revenue and internet marketing. The internet provides plenty of ways that one can sale more things and many of which one can implement right away.

2) Social Objective: Unless and until if you are not popular or say famous among the market area you cannot stand in it with your brand. If you come with your old things in the market, people will go to dislike your services or goods. Because in day-to-day life fashion is changing therefore, they also want something different in their lifestyle. Well in this case, the concept of Demand and Supply will apply.

3) Save Time: With the help of online shopping facility people are saving their more time and investing somewhere. Here they have a flexibility to purchase and sell the products at a very reasonable price and can maintain their data at one place. They can operate their operations at home, some other place, out of towns etc easily.

4) Providing correct information: Another vital objective is to provide correct and accurate information about the product/services in detail to the user/customers so, that in near future they do not face any complexity about the product price and details. It should be very clear between the price description, product-size, color, quantity, availability of products in stock etc.

5) User Friendly: The main purpose of the business site to provide a user-friendly environment where anyone can operate. If people are facing any problems while searching or buying a product next time he/she will move on to another web-site where they use them according to its needs.

6) Establishing quick response services: Providing a good service holds the customer for a long duration. This point should be kept in mind that better service gives the better results in the business, customers automatically attracts towards the particular business sites, and they also tell the other people for this facility, with this, the goodwill of the business site will increase rapidly and earns more profit.

7) Selling a product or a Service online: This is basically the main reason behind the existence of any business website. Selling products and services is the most common objective. You have to provide full and comprehensive information on what you sell, allowing prospective customers to easily order from your site.

8) Establishing Rural Employment: Most of the E-commerce Business site generates employment for the person who lives in rural area. This directly gives opportunities to generate their source of income. Most of the state Govt. is also helping to generate more number of employment from this

PRELIMINARY SYSTEM ANALYSIS

PRELIMINARY SYSTEM ANALYSIS

All possible requirements of the system to be developed are captured in this phase. Requirements are set of functionalities and constraints that the end-user (who will be using the system) expects from the system.

The requirements are gathered from the end-user by consultation, these requirements are analyzed for their validity and the possibility of incorporating the requirements in the system to be development is also studied. Finally, a requirement specification document is created.

Each and every website has a need to be developed in such a way that the information which is to be given must be easily understandable and presentable.

Every system has a common Things and that is

- It is organized combination of different components.
- They are independent and inter-related
- They work for common objectives.

Thus, in order to carry out project successfully it should be analyzed properly purposes of preliminary system analysis is to find that whatever the project will be successful or not. The project will be possible with all available resources like cost, time, human resources current business environment and technology. The System analysis is the method where the whole system is studied very in detail and as the basis the analysis a complete product is presented in front of the customers.

The phases which should be studied in the preliminary system are as-

- Identification of Need
- Preliminary Investigation
- Feasibility Study
- Need of new system.
- Flaws in present System.

Identification of Need :

Before working on any system, management must analyze the need of prospective users. System should be according to the requirements of users. Management must know what the problem is before it can be solved. We can find out the real problem of the existing system. With clear understanding of the problem, we can take lessons make it advantage of current system. So it is necessary to identify the actual problem.

In order to carry out any project successfully the first and foremost requirement is to identify the need to carry out the project. The system analyst should first of all derive the needs or the objective of the project. This helps him to make analyst that whether the particular system that is currently undertaken is feasible or not.

The project Khadi Udyog is opted for promoting the khadi clothes. In this website we are selling khadi clothes and providing a platform to users where they can easily sell their products and they can also maintain the record of their products.

Preliminary Investigation:

This is the stage where the first investigation is being carried out by the developer who actually wants to develop a project. Any person related with the system initiate the request. This problem is investigated in the preliminary investigation. This is the stage where the need and requirement of the user identified being investigated and develop a new system as per user requirements. This activity has three parts Request Certification, feasibility Study and Request approval. We have seen various websites and we have found that it contains only the information about khadi but there are only few websites where users can buy khadi clothes and also sell their products.

Feasibility Study :

This is the stage where the feasibility is being studied by the developer for the project. The feasibility study is useful to evaluate the cost and benefit of the new system requested. The feasibility study tries to anticipate future scenarios of the software development. It evaluates the benefits of the new system. The aim of the feasibility study is to see whether it is possible to develop a system at a reasonable cost. At the end of the feasibility study a decision is taken whether to proceed or not. Feasibility study is to determine various solutions of the problem and then picking up one of the best solution. It is measure of how beneficial the development of information system will be to an organization.

The feasibility study has the following objectives:-

- Defines the problem clearly.
- Effective use of resources.

- Analyze the cost and benefit.

A feasibility study looks at the viability of an idea with an emphasis on identifying potential problems. The feasibility study tries to anticipate future scenarios of the software development.

1) Technical feasibility: The technical feasibility always focuses on the existing computer hardware and software. This is also includes the need for more hardware and software and the possibility of installing such facility. Technical feasibility concentrates on aspect of project to find out the various hardware and software requirements for the project. In technical feasibility the following issues are taken into consideration:-

- Whether the required technology is available or not.
- Whether the required resources are available like management programmers, tester & debuggers software and hardware.

Once the technical feasibility is established, it is important to consider the monetary factors also, since it might happen that developing a particular system may be technically possible but it may require huge investments and benefits may be less. For evaluating this economic feasibility of the proposed system it carried out.

2) Economical Feasibility: Economical analysis is the most frequently used method for evaluating the effectiveness of candidates system. It is also called as cost benefit analysis, the procedure is to determine the benefit and saving that are expected from candidate system and compare them with cost. It benefits outweigh cost then decision is made to design and implement system. It becomes easy to manage such records. Economical Feasibility is

helpful for finding the system development cost and benefit, it checks whether it is justifiable or not, for that it checks the software and hardware costs etc.

3) Operational feasibility: Operational feasibility considers the acceptability of the system. It checks whether the system will be used if it is developed and implemented and the user of the new system will be able to handle the system or not. The operational feasibility mostly looks to the part that how easily the project can be put into action. It looks over that, is there any difficulty on loading of this project or is the project operating smoothly afterwards. This project is operationally feasible on the screen itself. While making any project it is necessary to study the operational features.

Need of New System:

New system is being prepared keeping in mind that it deals effectively & more flexibly than the existing system. New system & technologies may allow faster processing, more storage, and lower costs than ever before. Today, when everything is becoming more and more computerized, one may feel that the task of keeping the records should also be done automatically using the computer programs.

The need of new system arises due to the following reasons:

- For maintaining the accurate report need transmitted between departments so that proper co - ordination can be maintained between them.
- For creating a friendlier environment, than the previous existing system for the users.

Project Category

Project Category

PHP:-

Hypertext Preprocessor is a general - purpose programming language originally designed for web development. It was originally created by Rasmus Lerdorf in 1994. PHP is a widely-used open source general-purpose scripting language that is especially suited for web development and can be embedded into HTML. The PHP code is enclosed in special start and end processing instructions `<? php` and `?>` that allow you to jump into and out of "PHP mode."

Basic Syntax for PHP: -

```
<!DOCTYPE html>
<html>
<head>
<title>TITLE OF THE PAGE</title>
</head>
<body>
<h1>PHP SYNTAX</h1>
<?php
echo "Welcome to the PHP SYNTAX."
?>
</body>
</html>
```

HTML:-

HTML stands for Hypertext Markup Language. This Special Language is used to create web pages and web applications. Web browsers receive HTML documents from a web server or from local storage and render the documents into multimedia web pages. HTML describes the structure of a

web page semantically and originally included cues for the appearance of the documents.

HTML elements are the building blocks of HTML pages. With HTML, constructors, images and other objects such as interactive forms may be embedded into the rendered page. HTML provides a means to create structured documents by denoting structural semantics for text such as heading, paragraphs, lists, labels, titles, links, tables and other items. HTML elements are delineated by tags, written using angular brackets. Tags such as `` and `<input/>` directly introduce content into the page. Other tags such as `<p>` surrounded and provide information about document text and may include other tags as sub-elements. Browsers do not display the HTML tags, but use them to, interpret the content is the page.

BASIC SYNTAX OF HTML:

<HTML>

HTML document starts and end with an `<HTML>` tag. Once you open an `<HTML>` tag you are expected to close it by calling `</HTML>` tag.

<HEAD>

To create a head element start with `<head>` then include all of the elements you want in your head section, then end the head element with a `</head>` tag.

<BODY>

The real content for any HTML document occurs in the body section, which is enclosed between `<BODY>` and `</BODY>` tags. Two Categories of Body Elements There are two basic categories of HTML elements used in the body section:

- Block-Level Elements
- Text-Level Elements

Block-level elements are used to define groups of text for a specific role. They include tags that position text on the page, begin new paragraphs, set heading levels and create lists. Some commonly used block-level elements and their tags are:

Paragraph: <P> and </P>

Heading, level one: <H1> and </H1>

Heading, level two: <H2> and </H2>

Horizontal rule: <HR>

Centering: <CENTER>

Paragraph: <P> and </P>

Heading, level one: <H1> and </H1>

Heading, level two: <H2> and </H2>

Horizontal rule: <HR>

Centering: <CENTER>

Bold: and

Italic: <I> and </I>

Line-break:

Link anchor: and

SOFTWARE AND HARDWARE **REQUIREMENT SPECIFICATION**

SOFTWARE AND HARDWARE REQUIREMENT SPECIFICATION

HARDWARE:

Hardware is being is defined as under it contain how processor speed and how much RAM will be utilized for the better performance of the website –

- RAM - 4GB
- HARDWARE - 500GB or More
- INPUT - Keyboard and Mouse

SOFTWARE:

Computer software, or simply software, is a collection of data or computer instructions that tell the computer how to work. This is in contrast to physical hardware, from which the system is built and actually performs the work.

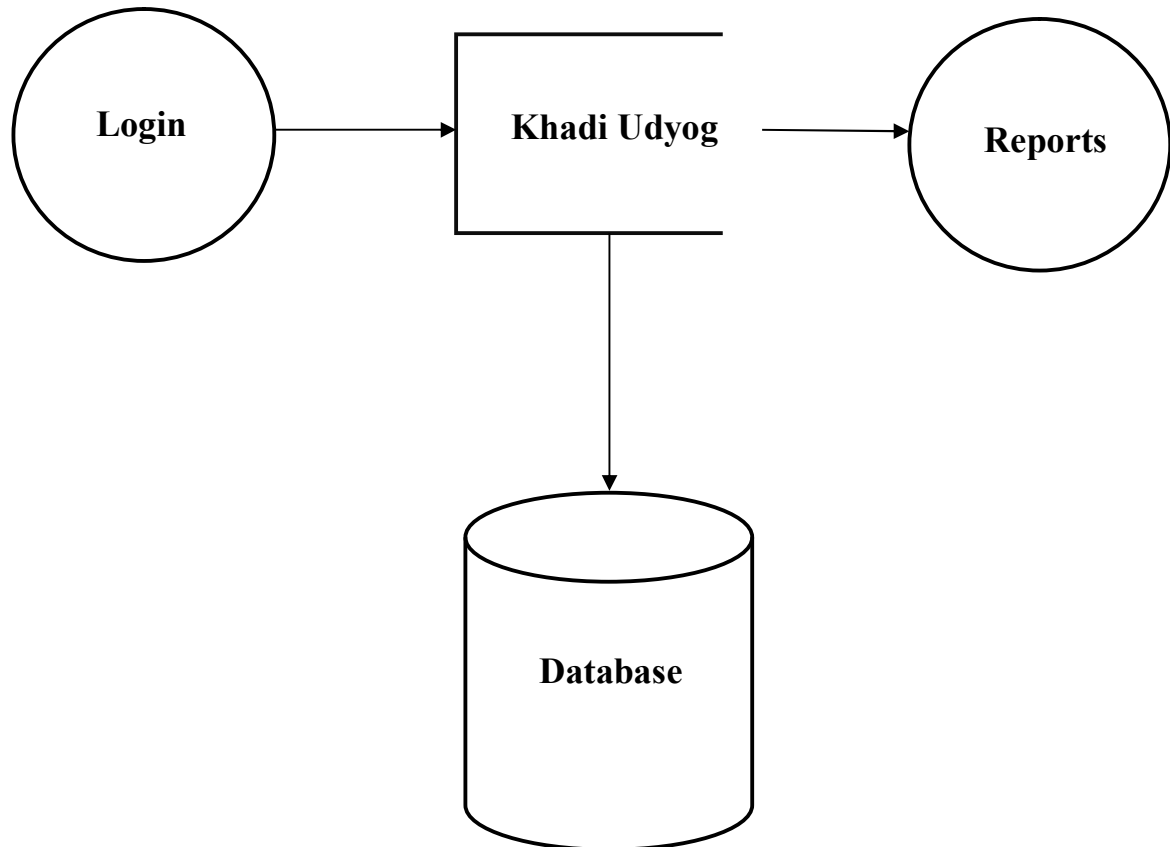

- Internet Explorer
- Google Chrome
- XAMPP

OPERATING SYSTEM:

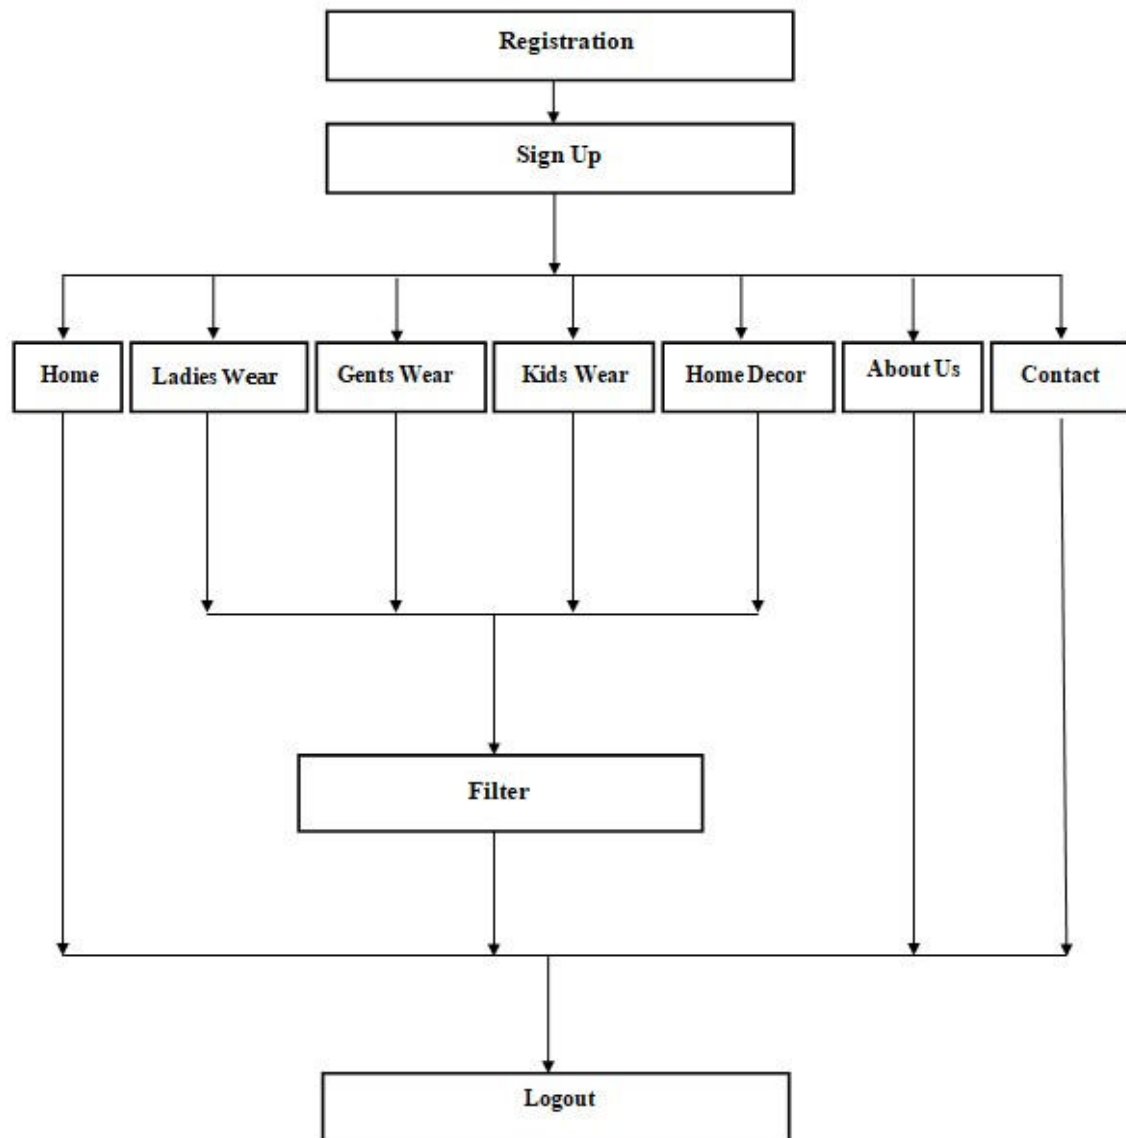

- Windows 7
- Windows 10

TESTING

Testing

Testing Procedure:

Testing phase was included on our project in order to get an idea when the errors located into our project. Testing is vital to the success of the system. System testing makes a logical assumption that if all the parts of the system are correct, the goal will be successfully achieved. Inadequate testing or non-testing leads to errors that may not appear until months later .

This creates two problems:

- 1) The time lag between the causes and the appearance of the problem (the longer the time interval, the more complicated the problem has become), and
- 2) The effect of the system errors on files and records within the system. A small system error can conceivably explode into a much larger problem.

Testing Techniques:

1) System Testing: In our project we have used this particular testing to ensure that the system is working correctly or not. It is a testing in which testing is done to check that by putting the software in different environment i.e. (in different operating systems) is working or not.

2) Load Testing: Load Testing is also known as performance testing which checks the overall performance of the project. In our project we have also used this testing which helps us to check the system's behavior under different loads. Testing of an application under heavy loads on the particular website is to be determine at what point the system's response time degrades or fails

3) Stress Testing: This particular testing is conducted to find the performance of the system in peak hours, it raise to how much the system can face. We have done the testing of this project and we have seen that software can work in any condition.

4) Documentation Testing: Documentation Testing is necessary for the project. It relies to find out whatever document supplied are satisfactory or any further document should be supplied in the project .We have done documentation testing, so all the documents which are supplied with project is satisfactory.

FUTURE SCOPE

Future Scope

We think that not a single project is ever considered as complete forever because our mind is always thinking new and our necessities is increasing day-by-day. The project is made for remote shopping or shopping through internet. As the technology is being advanced the way of life is changing accordance. Now a day we can place the order for anything from our home or some were else. There is no need to go the particular shop and buy the products or services as well as Payment confirmation and Order confirmation we are also receiving within a seconds in our own device. In future we will try to make this website work so flexible and beneficial for the customers and also try to make smooth service.

Following are the some limitations of our present system that can be added in future:

- It may be distributed not only to the native people but can be distributed globally which will ensure international corporations.
- It will provide notifications for the new arrivals.
- We will provide more portions for the payment sections; in which user can also choose the E-banking facility, EMI facility.
- We will develop Window Based Application; with this people can download our application from the play store.
- It will provide once the buyer/user placed his/her product they will receive the reward points from which they can use it on their next order.
- It will also provide a facility to add , remove the or update users Profile Picture on the user section

CONCLUSION

Conclusion

The project entitled “**Khadi Udyog**” online hopping website is develop using the Frontend as PHP and Backend as PHP & MySQL. However, a lot of features are already incorporated in this project. The main beneficiaries are user/customer can add his/her designer *khadi* material used cloths and handmade ornaments or some other products.

Following are the some points which conclude the whole project:

- This will allow the customers to place an order without even going to the market or shops.
- Being able to buy and sell products, anywhere, anytime.
- This will provide some different touch in the fashion.
- Our website is totally digital reduces paper work which is indirectly a step towards the cash economy.
- This is indirectly providing employment to the rural areas.
- Indirectly this particular website providing brief information about the creativity of the rural sectors people and their efforts.
- Our website is not only providing a platform for the buyers to buy but also providing to purchase, to know about the *khadi* cloths.

APPROVED COPY OF SYNOPSIS

**A
PROJECT SYNOPSIS
ON
“Khadi Udyog”**

**Submitted to
Rashtrasant Tukadoji Maharaj Nagpur University,
NAGPUR
In the Partial Fulfillment of
B.Com. (Computer Application) Final Year**

**Submitted by
Aastha Tyagi
Kanak Sinha**

**Under the Guidance of
Pravin J. Yadao**

**G. S. College of Commerce & Economics
Nagpur
2019-2020**

1. Introduction:

We have decided the topic “Khadi Udyog”. This brings back the tradition with modern way.

Here people can order khadi products, grasp the special offers, special facilities.

2. Objectives of the project:

- a. Connecting to the E-Booking System.
- b. Spreads awareness of the E-Business.
- c. Promotes the Online Facilities.
- d. Direct Communication with the Service Provider.

3. Project Category: Web-Based Application**4. Tools/Platform/Languages to be used:**

- Tool: Notepad ++
- Platform: Windows Operating System
- Language: PHP & MySQL

5. Scope of future application:

- a. Updates Notifications Facilities.
- b. Comparison between the other existing portals.
- c. Reward Points.
- d. 24x7 facilities.
