

**A
PROJECT
ON
“INDUSTRIAL VISIT & TOUR PLANNER”**

Submitted to

**Shiksha Mandal's
G. S. COLLEGE OF COMMERCE & ECONOMICS, NAGPUR**

**(AUTONOMOUS)
In the Partial Fulfillment of**

B.Com. (Computer Application) Final Year

Submitted by

**Deepak K. Gayakwad
Dev S. Yennewar**

**Under the Guidance of
Pravin J. Yadao**

**Shiksha Mandal's
G. S. COLLEGE OF COMMERCE & ECONOMICS, NAGPUR
(AUTONOMOUS)
2022-2023**

Shiksha Mandal's

**G. S. COLLEGE OF COMMERCE & ECONOMICS,
NAGPUR**

**(AUTONOMOUS)
CERTIFICATE**

(2022 - 2023)

This is to certify that Mr. Deepak K. Gayakwad and Mr. Dev S. Yennewar has completed their project on the topic of "Industrial Visit And Tour Planner" prescribed by G. S. College of Commerce & Economics, Nagpur (Autonomous) for B.Com. (Computer Application) – Semester-VI.

Date:

Place: Nagpur

Project Guide

External Examiner

Internal Examiner

ACKNOWLEDGEMENT

We take this opportunity to express our deep gratitude and whole hearted thanks to project guide Prof. Pravin Yadao, Coordinator for his guidance throughout this work. We are very much thankful to him for his constant encouragement, support and kindness.

We are also grateful to our teachers Prof. Rahul Tiwari, Prof. Sushma Gawande, Prof. Preeti Rangari, Prof. Prajkta Deshpande and Prof. Haresh Naringe for their encouragement, help and support from time to time.

We also wish to express our sincere thanks to Principal Dr. S.S. Kathaley for providing us wide range of opportunities, facilities and inspiration to gather professional knowledge and material without which this project could not have been completed.

Deepak K. Gayakwad

Dev S. Yennewar

Place: Nagpur

DECLARATION

We **Deepak K. Gayakwad and Dev S. Yennewar** hereby honestly declare that the work entitled “**Industrial Visit And Tour Planner**” submitted by us at G. S. College of Commerce & Economics, Nagpur (Autonomous) in partial fulfillment of requirement for the award of B.Com. (Computer Application) degree by Rashtrasant Tukadoji Maharaj, Nagpur University, Nagpur has not been submitted elsewhere for the award of any degree, during the academic session 2022-2023.

The project has been developed and completed by us independently under the supervision of the subject teacher and project guide.

Deepak K. Gayakwad
Dev S. Yennewar

Date:

Place: Nagpur

Introduction

1) Introduction:

Our project Title is “Industrial Visit And Tour Planner”. This project helps students and travellers plan an industrial visit across the different cities in Maharashtra, like Nagpur, Pune, etc. This website also helps you get easy information about companies so you can visit them. Visit in company; students can also enjoy and see the sightseeing places near the industries and across the cities.

The Industrial Visit & Tour Planner website is an online platform that provides information for organising and planning industrial visits and tours. It is designed to help educational institutions and individuals plan and organise industrial visits and tours efficiently and effectively. This website provides information about different industries and sectors, including their location, e-mail, phone number, etc. It may also provide information such as the distance from industry and sightseeing places and how much time is needed to travel and see the sightseeing places.

This website is designed in such a way that anyone can easily use it or access it from anywhere. Starting with the very first page of the website, first all users have to login to the website with a "Login ID" and "Password." If the user enters an incorrect password, a message will pop up on the screen saying "Invalid Password." This is for security purposes.

After entering the website, the master page of the website will appear. If we click on the home page, there will be some options displayed on the screen, like "Home," "Destination," "About Us," "Contact Us," etc., side by side. Under the

heading "Destination," there are three more options. Nagpur, Aurangabad, and Pune In this option, the user can see all the information about the particular industry, like name, address, email ID, etc. After selecting "About Us," the user can see all the information about our website. After seeing "About Us," the next is "Contact Us," which is located on the right side of "About Us." After clicking the "Contact Us" option, you will see the information of the website's team members and their contact details. If a complaint or problem occurs while using the website, the user can contact us using this information.

This is all about our website. It is very simple and easy to use anyone can access it anytime and anywhere. An industrial visit and tour planner website can be a valuable resource for anyone looking to organise an industrial visit. By providing all necessary information in one convenient location, it can save time and effort and ensure that the visit is educational and enjoyable for all participants.

OBJECTIVES

2) Objectives:

❖ **Eliminates Misconceptions:**

Many times students have misconceptions about the workplace. These misconceptions can be eliminated with the help of industrial visits. Students may have certain pre-conceived notions based on what they see on television or hear through peer group stories. Having industrial tours can help students get the right perspective of the working of an industry.

❖ **User-Friendly:**

This website aims at providing a User-Friendly interface for the users as it is considered as the most important factor while developing any website or application. The interface is designed such that the user having basic working knowledge of computers can use this website easily. Therefore, there will be no need to train the user to go through the website.

❖ **Time Saver:**

The websites and applications are made to avoid waste of time of both customers and service providers. The user need can get all the information they are required at one place. So, the user don't have to visit n number of websites.

❖ **Providing information:**

The website should provide detailed information about the industries, companies, and facilities available for visits, as well as the benefits and educational opportunities associated with each visit.

❖ **Building trust:**

The website should build trust with its visitors by providing accurate and up-to-date information about the industries available for visits.

❖ **Easy to use:**

This website is easy to use. Easy to understand all the information about Industrial Visit and Tour Planning. This website has some form of navigation. An easy, effective to browse a competitor website.

❖ **Increase Knowledge:**

On this website, information on industrial visits and tour planning is provided, which helps increase student knowledge and improve user interest.

PRELIMINARY SYSTEM ANALYSIS

3) Preliminary System Analysis:

3.1) Preliminary Investigation

Preliminary investigation is the first stage of system development. In this process, we gathered some brief information so we could develop a website, software, and applications.

In the beginning of projects, we try to make websites user-friendly so the user can use the website easily.

The industrial visit and tour planner website is very easy to handle, saving the user time as well as providing valuable information in today's world. Therefore, each user can access this website anytime and anywhere or search for it very easily by using this internet facility.

HTML is a markup language because it is used for designing different web pages and their appearance. And also use of CSS is give the more happy to designed website.

This website provides information on industrial visits and tour planning, and it's so easy to build and add information to it. This website prefers that users handle it in a friendly environment.

There is a list of companies listed on the website, and we have also provided information about the sightseeing places so the user can make the tour more enjoyable.

While making the websites, we search other websites for storing information, and during that time, we learn more information about their industry. And this information is very helpful to us.

3.2) Present System in Use:

There are several online platforms available that specialize in industrial visit and tour planning, such as VisitDays, Visitly, and Visit.org. These platforms allow organizations to create customized itineraries and manage all aspects of the visit, including transportation, lodging, and scheduling of tours and meetings with industry experts.

Some organizations may choose to develop their own software to manage industrial visits and tours. This allows them to tailor the system to their specific needs and requirements, and can include features such as real-time tracking of visitor movements and automated scheduling of tours and meetings.

3.3) Flaws in Present Sytem:

- ❖ **Poor communication:** In some cases, communication between the organization and participants may be inadequate, which can lead to confusion or misunderstandings about the visit logistics.
- ❖ **Lack of real-time updates:** Some systems may not provide real-time updates on the status of the visit or the location of participants, which can make it difficult for organizers to manage the visit effectively.
- ❖ **Technical issues:** Any system, including online platforms or custom-built software, can experience technical issues that can disrupt the planning and execution of the visit.
- ❖ **Images that lack of quality:** As website is outdated so low resolution of images are available which are unacceptable by users.
- ❖ **Security:** As security facility is not available so unsecure website can pose a problem there will be chances of misuse of data and also a user will be hesitate to visit the system.

3.4) Need Of New System:

There is a need for a new system in industrial visit and tour planning that can address the current flaws in the existing systems and improve the overall efficiency and effectiveness of the planning process. Here are some potential benefits of a new system:

- ❖ **Increased customization:** A new system could offer more customization options, allowing organizations to tailor the visit to their specific needs and requirements.
- ❖ **Improved scheduling flexibility:** A new system could provide more flexibility in scheduling tours and meetings, reducing conflicts and missed opportunities for participants.
- ❖ **Enhanced communication:** A new system could improve communication between the organization and participants, reducing confusion and misunderstandings about the visit logistics.
- ❖ **Real-time updates:** A new system could offer real-time updates on the status of the visit or the location of participants, making it easier for organizers to manage the visit effectively.
- ❖ **Improved accessibility:** A new system could be designed with accessibility in mind, making it more inclusive for participants with disabilities or those who speak different languages.
- ❖ **Reduced technical issues:** A new system could be developed with a focus on stability and reliability, reducing the likelihood of technical issues that can disrupt the planning and execution of the visit.

3.5) Feasibility Study

Feasibility study is the feasibility analysis or it is a measure of the software product in terms of how much beneficial product development will be for the organization in a practical point of view. Feasibility study is carried out based

on many purposes to analyze whether software product will be right in terms of development, implantation, contribution of project to the organization etc.

Feasibility Study various types of studies, every organization before starting developing of system must do thorough study of every aspect of the software related to it. It gives the better vision to the system development, availability of resources the organization has and detailed analysis of whole system.

To develop the website the various types of feasibility study are studied, they are as follows:

❖ **Technical Feasibility :**

In Technical Feasibility current resources both hardware software along with required technology are analyzed/assessed to develop project. This technical feasibility study gives report whether there exists a correct required resources and technologies which will be used for project development.

❖ **Operational Feasibility :**

In Operational Feasibility degree of providing service to requirements is analyzed along with how much easy product will be to operate and maintenance after deployment In operational feasibility analysis the ease and simplicity of operation of proposed system is highlighted. Our Website does not require any special skill set for users to operate it. In fact, it is designed to be used by almost everyone very easily .

❖ **Economic Feasibility :**

The total estimated cost of the project has been projected. What will be the cost needed to develop a project right form collecting the resources to the implementation has been discussed. The financial aspects of the

projects and the current budget we have in our hand to develop the project is suitable for the execution or not is studied. After analysing and proper distribution of the budget between various sections the Project is completely financially feasible. The cost which will be needed to buy all the requirements of the project is already finalised properly.

❖ **Legal Feasibility :**

In legal feasibility, ensured that the website we are developing is legal in the laws and permitted by the law. Any information which will be provided will not hurt the cultural and religious sentiments of the people and the information we are providing on the site from the sources are valid or not is ensured.

❖ **Time Feasibility :**

In time feasibility study, taken into account the period in which the project is going to take up to its completion. We made sure that the project will not take too long for completion.

3.6) Project Category: Website/Web Application

PROGRAMMING LANGUAGE USED IN PROJECT

HTML (Hyper Text Markup Language):

HTML stands for Hyper Text Markup Language. It is used to design web pages using a markup language. HTML is the combination of Hypertext and Markup language. Hypertext defines the link between the web pages. A markup language is used to define the text document within tag which defines the structure of web pages. This language is used to annotate (make notes for the computer) text so that a machine can understand it and manipulate text accordingly. Most markup

languages (e.g. HTML) are human-readable. The language uses tags to define what manipulation has to be done on the text.

HTML is a markup language used by the browser to manipulate text, images, and other content, in order to display it in the required format.

The Hyper Text Markup Language or HTML is the standard markup language for documents designed to be displayed in a web browser. It can be assisted by technologies such as Cascading Style Sheets (CSS) and scripting languages such as JavaScript. Web browsers receive HTML documents from a web server or from local storage and render the documents into multimedia web pages. HTML describes the structure of a web page semantically and originally included cues for the appearance of the document.

Hyper Text Markup Language (HTML) is the set of markup symbols or codes inserted into a file intended for display on the Internet. The markup tells web browsers how to display a web page's words and images. Each individual piece markup code (which would fall between "<" and ">" characters) is referred to as an element, though many people also refer to it as a tag. Some elements come in pairs that indicate when some display effect is to begin and when it is to end.

HTML elements are delineated by tags, written using angular brackets. Tags such as and <input> directly introduce content into the page. Other tags such as <p> surrounded and provide information about document text and may include other tags as sub-elements. Browsers do not display the HTML tags, but use them to, interpret the content is the page.

Hyper Text is the method by which Internet users navigate the web. By clicking on special text called hyperlinks, users are brought to new pages. The use of hyper means it is not linear, so users can go anywhere on the Internet simply by clicking on the available links. Markup is what HTML tags do to the text inside of them; they mark it as a specific type of text. For example, markup text could come in the form of boldface or italicized type to draw specific attention to a word or phrase.

SYNTAX:

```
<!DOCTYPE html>
<HTML>
  <HEAD>
    <TITLE> Page Title </TITLE>
  </HEAD>
  <BODY>
    Main Content
  </BODY>
</HTML>
```

Syntax Explained:

The `<!DOCTYPE html>` declaration defines that this document is an HTML5 document.

<HTML>: The `<HTML>` element is the root element of an HTML page. HTML document starts and ends with an `<HTML>` tag. Once you open an `<HTML>` tag you are expected to close it by calling `</HTML>` tag.

<HEAD>: The `<HEAD>` element contains Meta information about the HTML page. To create a head element start with `<head>` then include all of the elements you want in your head section, then end the head element with a `</head>` tag.

<TITLE>: The `<TITLE>` element specifies a title for the HTML page (which is shown in the browser's title bar or in the page's tab).

<BODY>: The <BODY> element defines the document's body, and is a container for all the visible contents, such as headings, paragraphs, images, hyperlinks, tables, lists, etc. The real content for any HTML document occurs in the body section, which is enclosed between <BODY> and </BODY> tags.

ELEMENTS:

There are two categories of HTML elements used in the body section:

- Block-Level Elements
- Text-Level Element

Block-level elements: Block-level elements are used to define groups of text for a specific role. They include tags that position text on the page, begin new paragraphs, set heading levels and create lists. Some commonly used block-level elements and their tags are:

Paragraph: <P> and </P>

Heading, level one: <H1 > and </H1 >

Heading, level two: <H2> and </H2>

Horizontal rule: <HR>

Centering: <CENTER>

Paragraph: <P> and </P>

Heading, level one: < HI > and </HI >

Heading, level two: <H2> and </H2>

Horizontal rule: <HR>

Centering: <CENTER>

Bold: and

 Italic:

<I> and </I>

Line-break: < BR>

Link anchor: and

CSS (Cascading Style Sheets):

Cascading Style Sheets, fondly referred to as CSS, is a simply designed language intended to simplify the process of making web pages presentable. CSS allows you to apply styles to web pages. More importantly, CSS enables you to do this independent of the HTML that makes up each web page. CSS is easy to learn and understood, but it provides powerful control over the presentation of an HTML document.

Cascading Style Sheets, fondly referred to as **CSS**, is a simply designed language intended to simplify the process of making web pages presentable. CSS allows you to apply styles to web pages. More importantly, CSS enables you to do this independent of the HTML that makes up each web page. CSS is easy to learn and understood, but it provides powerful control over the presentation of an HTML document.

A CSS comprises style rules that are interpreted by the browser and then applied to the corresponding elements in your document. A style rule set consists of a selector and declaration block.

There are three types of CSS which are given below:

- Inline CSS
- Internal or Embedded CSS
- External CSS

Properties:

CSS uses various properties to enhance the presentation of results. These properties are background, border, font, float, display, margin, opacity, padding, text-align, vertical-align, position, color etc.

SYNTAX:

1. **Inline CSS:**

```
<htmltag style="cssproperty1:value; cssproperty2:value;">
```

```
</htmltag>
```

2. **Internal or Embedded CSS:**

```
<!DOCTYPE html>
```

```
<HTML>
```

```
<HEAD>
```

```
<!-- Head section of web page -->
```

```
<TITLE></TITLE>
```

```
<!-- Stylesheet of web page -->
```

```
<STYLE></STYLE>
```

```
</HEAD>
```

3. External CSS:

```
< <head>
<
[ ]
<link rel="stylesheet" type="text/css" href="mystyle.css"
>
[ ]
<
```

PHP(Personal Home Page):-

PHP means – Personal Home Page, but it now stands for the recursive backronym PHP: Hypertext Preprocessor. PHP code may be embedded into HTML code, or it can be used in combination with various web template systems, web content management system and web frameworks. A PHP file can also contain tags such as HTML and client side scripts such as JavaScript.

- HTML is an added advantage when learning PHP Language. You can even learn PHP without knowing HTML but it's recommended you at least know the basics of HTML.
- Database management systems DBMS for database powered applications.
- For more advanced topics such as interactive applications and web services, you will need JavaScript and XML.

MySQL

- • MySQL is a database system used for developing web-based software applications.
- MySQL used for both small and large applications.
- MySQL is a relational database management system (RDBMS).
- MySQL is fast, reliable, and flexible and easy to use.
- MySQL supports standard SQL (Structured Query Language).
- MySQL is free to download and use.

- MySQL was developed by Michael Widenius and David Axmark in 1994.
- MySQL is presently developed, distributed, and supported by Oracle Corporation.
- MySQL Written in C, C++.

Features of MySQL-

- MySQL server design is multi-layered with independent modules.
- MySQL is fully multithreaded by using kernel threads. It can handle multiple CPUs if they are available.
- MySQL provides transactional and non-transactional storage engines.
- MySQL has a high-speed thread-based memory allocation system.
- MySQL supports in-memory heap table.
- MySQL Handles large databases.

**SOFTWARE AND
HARDWARE
REQUIREMENT
SPECIFICATIONS**

SOFTWARE AND HARDWARE REQUIREMENT SPECIFICATIONS:

SOFTWARE

Every website and application needs Software in which they can be executed and Hardware to perform the functions and operations effectively. Some Websites and applications are not compatible with all the devices having different hardware and software configurations.

Some websites and application requires a specific platform to execute the operation, some websites are not compatible with all the browsers as we have so many browsers available in the market like Internet Explorer, Google Chrome, Mozilla Firefox, etc. Some features are not supported by all the browsers, hence the right browser should be selected for the operation. Some needs servers as PHP requires Xampp, Wamp server.

SOFTWARE REQUIREMENTS:

Operating System	Windows 7 onwards
Browser Compatibility	Microsoft Edge Mozilla Firefox Google Chrome

HARDWARE

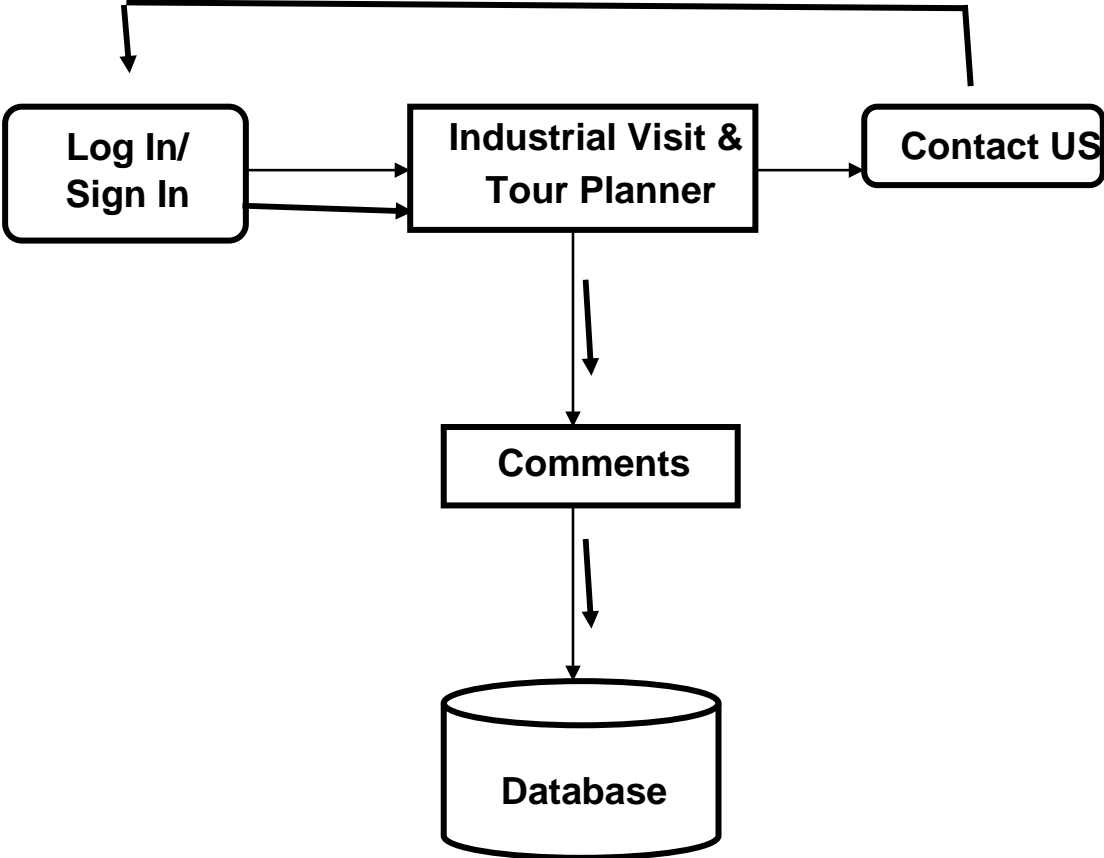

Hardware is the term that refers to all the physical parts that make up the computer i.e. the internal hardware devices. Various devices which are essential to form a hardware is called as Components. Similar to software, these websites or applications requires certain configurations in the hardware to execute the operation. The speed of the Processor, utilization of RAM, available space in the Hard- Disk affect the execution and performance of the Website.

HARDWARE REQUIREMENTS –

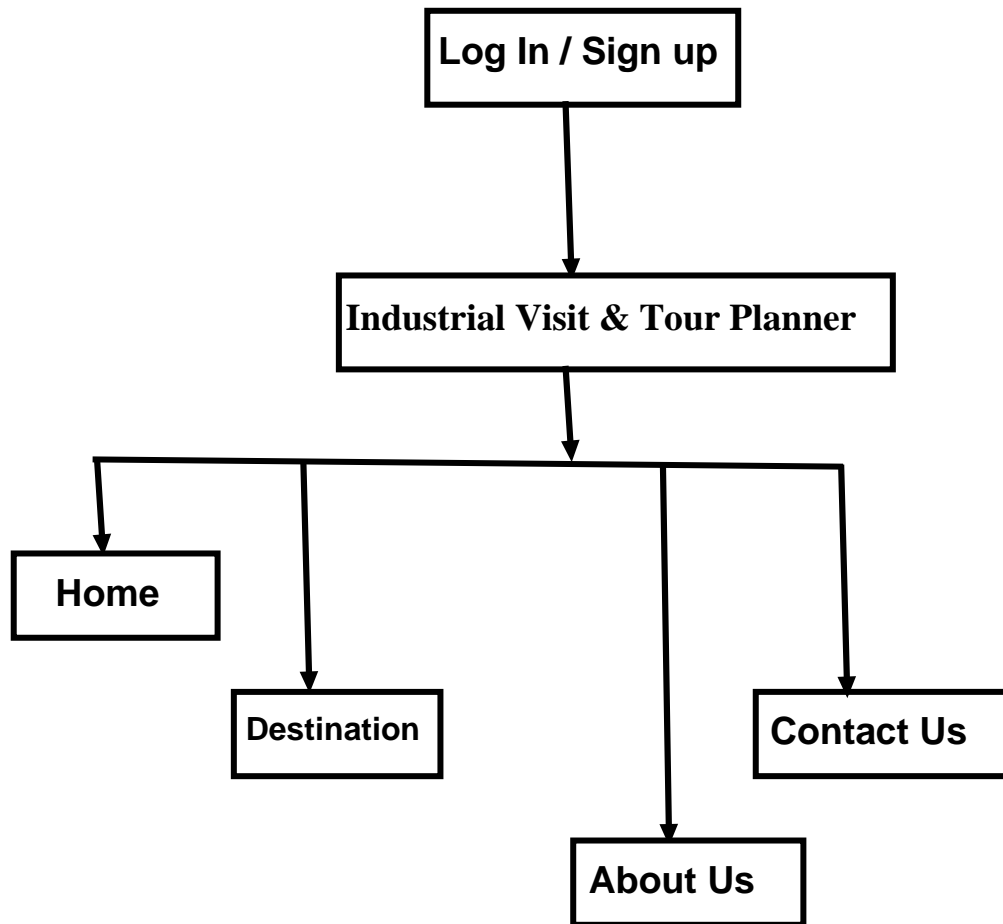

Device	Desktop/ Laptop
Processor	4 GHz minimum, multi-core processor
Memory (RAM)	At least 4GB or higher, and commensurate with concurrent usage
Hard-Disk Space	At least 10 GB
Input Devices	Keyboard, Mouse
Connection	Wi-Fi Adaptor or an active internet connection.

DETAILED SYSTEM ANALYSIS

Data Flow Diagram

Structure of Website

Data Structure and Tables:

The screenshot displays the phpMyAdmin interface for a MySQL database named 'project'. The 'users' table is selected, and its structure and data are visible. The table has four columns: 'id', 'username', 'email', and 'password'. The data is as follows:

id	username	email	password
1	devyennevar	devyennevar15@gmail.com	202cb962ac59075b964b07152d234b70
2	deepakgayakwad421	deepakgayakwad421@gmail.com	202cb962ac59075b964b07152d234b70
3	bbknk	devye@gmail.com	202cb962ac59075b964b07152d234b70
4	fojila4347crtseccom	devy2121e@gmail.com	202cb962ac59075b964b07152d234b70
5	devyennevar	deepakgay@gmail.com	25f9e794323b453885f5181f1b624d0b
6	devyennevar	dknvknadsl@gmail.com	1e48c4420b7073bc11916c6c1de226bb
7	devyennevar	deg@gmail.com	7a674153c63cff1ad7f0e261c369ab2c
8	devyennevar	deg456@gmail.com	202cb962ac59075b964b07152d234b70
9	devyennevar	dee@gmail.com	202cb962ac59075b964b07152d234b70

The interface also shows a sidebar with a database tree, a top navigation bar with options like 'Browse', 'Structure', 'SQL', 'Search', 'Insert', 'Export', 'Import', 'Privileges', 'Operations', 'Tracking', and 'Triggers', and a bottom console area for executing queries.

This is the data structure table of form Signup form page which shows the user signup of the website . This data structure table stores information of the user like name , password and E-mail.

Contact Us Form Page Data structure and table :-

The screenshot displays the phpMyAdmin interface for a database named 'contactform'. The selected table is 'contact-data'. The table structure is as follows:

id	firstname	lastname	phone	email	messages	file
11	Deepak	Gayakwad	8149156640	deepakgayakwad421@gmail.com	Hello World	
12	VAIBHAV	PANDEY	9730785247	pandey07vaibhav@gmail.com	Hii how do you create this site?	
13	Dev	Yennewar	7709187494	devyennewar15@gmail.com	Hii how do you create this site?	
14	Dev	Yennewar	07709187494	devyennewar15@gmail.com	h	
15	deepal	deep	5555454544	devyennewar15@gmail.com	wddd	
16	deepal	axs	5555454544	deepakgayakwad421@gmail.com	ffdfdf	
17	deepal	deep	5555454544	deepakgayakwad421@gmail.com	ffdfdf	
18	deep	axs	12345678	dee@gmail.com	fgbjkb	

The console shows the following SQL query:

```
>SELECT * FROM `contact-data`
```

This is the data structure table of Contact Us form page which shows the user query of the website. This data structure table stores users query and information like name, email, phone, and their messages.

SYSTEM DESIGN

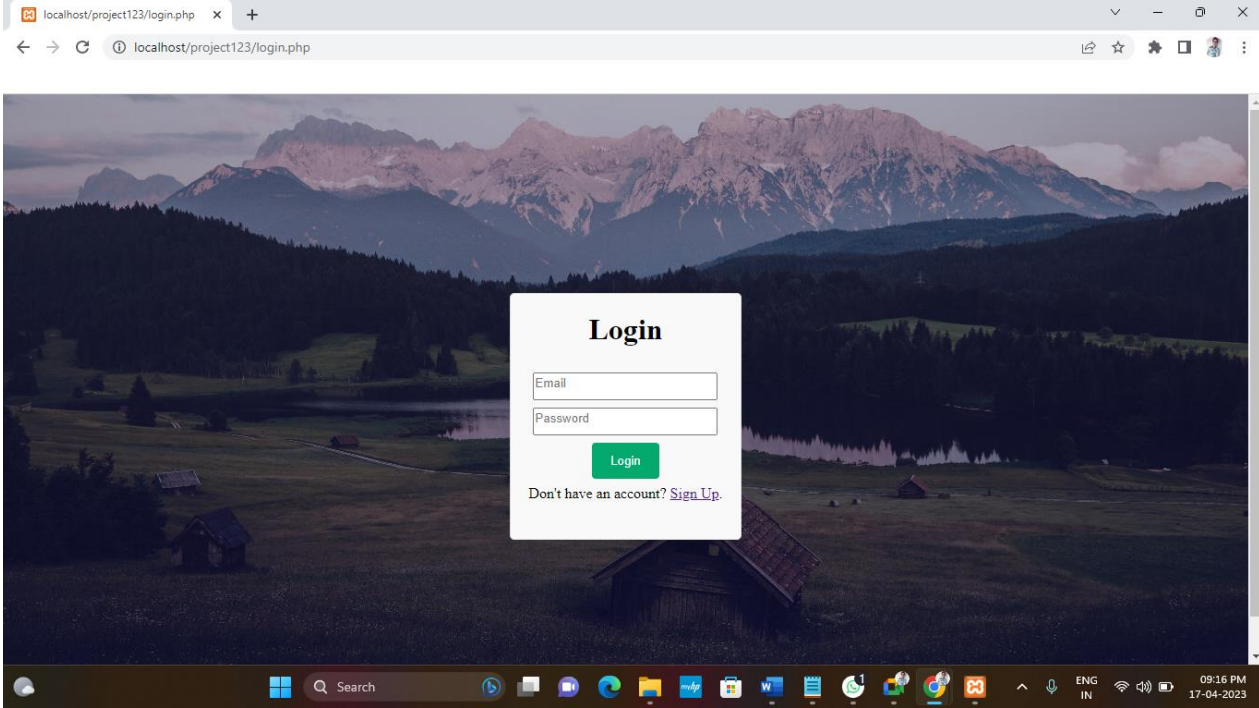

Form Design:-

Sign Up page:

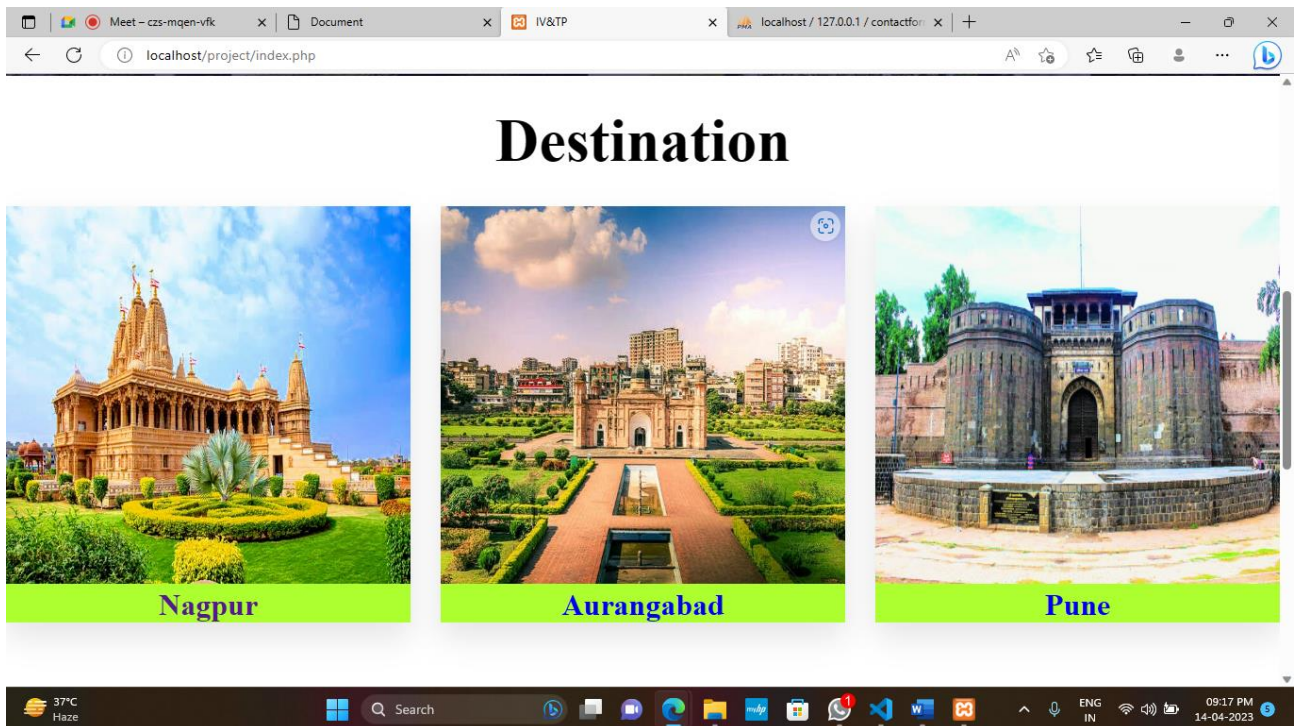

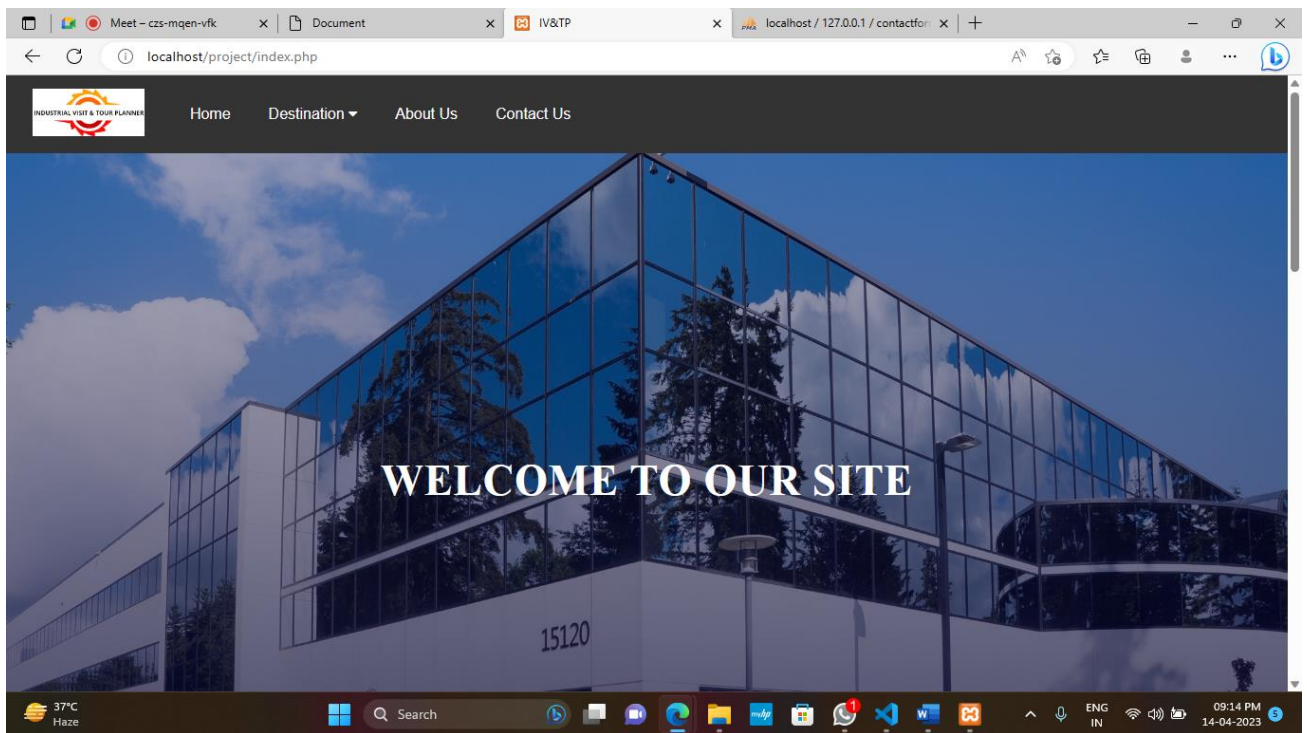

This is the Sign up form page where the users can Register.

Login page:

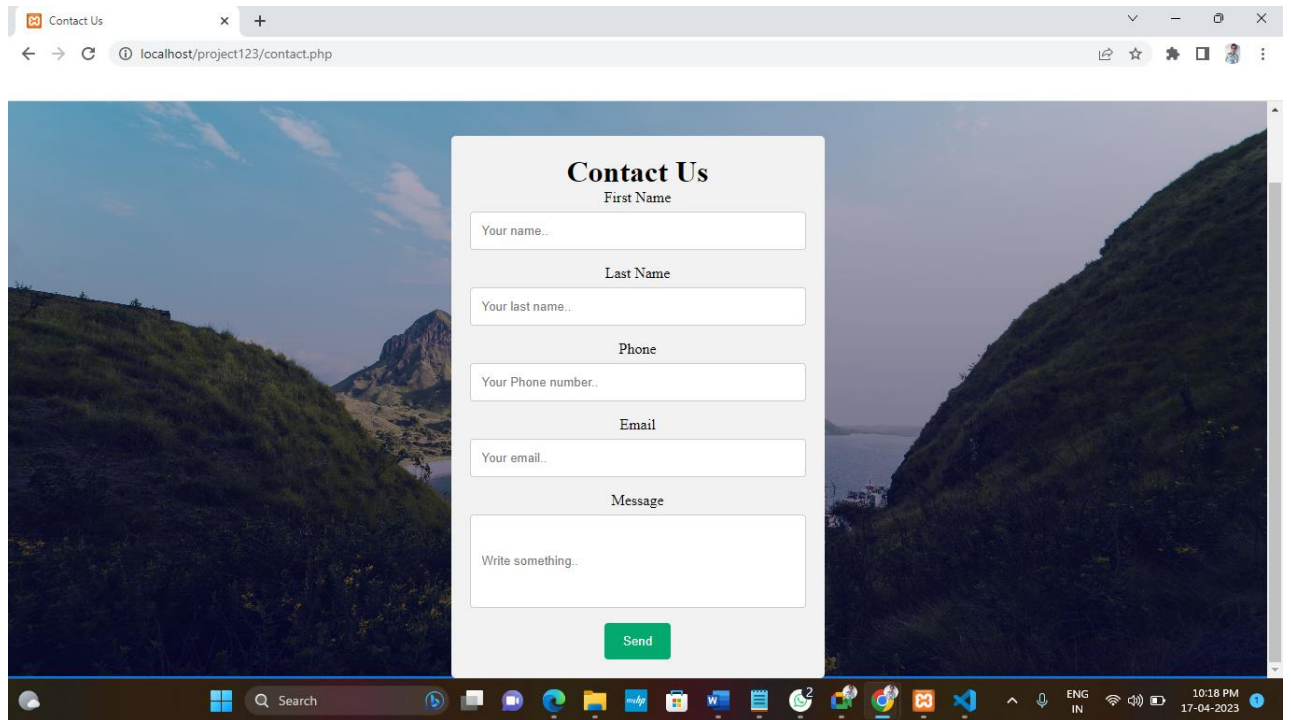

This is the Login page where all the registered users can login to Industrial Visit and Tour Planner Website.

Home page:

This is the Home page which is the first page of the website.

Contact Us Page:

The screenshot shows a web browser window with the address bar displaying 'localhost/project123/contact.php'. The page content is a contact form with the following fields:

- First Name**: Input field with placeholder text 'Your name..'
- Last Name**: Input field with placeholder text 'Your last name..'
- Phone**: Input field with placeholder text 'Your Phone number..'
- Email**: Input field with placeholder text 'Your email..'
- Message**: Textarea with placeholder text 'Write something..'

A green 'Send' button is located at the bottom of the form. The browser's taskbar at the bottom shows the Windows logo, search bar, and various application icons. The system tray on the right indicates the time as 10:18 PM on 17-04-2023.

This is the contact page help to user to send query or message to the developer.

Source Code:

Sign Up Page :

<!--Aurangabad Information-->

<section class="info">

<h1>Aurangabad</h1>

<p>Aurangabad laid low through most of the tumultuous history of medieval India and only hit the spotlight when the last Mughal emperor, Aurangzeb, made the city his capital from 1653 to 1707. With the emperor's death came the city's rapid decline, but the brief period of glory saw the building of some fascinating monuments, including Bibi-qa-Maqbara, a Taj Mahal replica, and these continue to draw a steady trickle of visitors. Alongside other historic relics, such as a group of ancient Buddhist caves, these Mughal relics make Aurangabad a good choice for a weekend excursion from Mumbai. But the real reason for traipsing here is because the town is an excellent base for exploring the World Heritage Sites of Ellora and Ajanta.</p>

<h1>Pune</h1>
```

```
<p>Pune is the 8th largest metropolis in India. It is in the Indian state of Maharashtra. The city is famous for the great Maratha king Chatrapati Shivaji Maharaj. The game of badminton was invented there in the 19th century. It is also the birthplace of spiritual teacher Meher Baba. Mula and Mutha are the two rivers that flow through the city. Pune is also considered to be the cultural capital of Maharashtra and the educational capital of India. The city is situated to the west of the lush greenery of the Western ghats, surrounded by mountains and hill forts. It has thriving educational, IT, agricultural and manufacturing sectors along with a vibrant nightlife consisting of local & global restaurants, pubs and clubs.</p>

<h3>INDIAN CARD CLOTHING CO. LTD</h3>
```

```
<p>The Indian Card Clothing Co. Ltd has been an innovator in card clothing manufacturing since its inception in 1955. Originally a joint venture between Carclo Engineering Group and English Card Clothing, this company was established to solidify the presence of these private industries in India by shifting their manufacturing for the Indian market to the domestic level. After Carclo acquired English Card Clothing in 1979, it became the largest, global card clothing manufacturer and provider. ICC helped pioneer this change, through the development of metallic card clothing, replacing flexibles in the cotton carding process.</p>

<h3>Industrial Visit & Tour Planner</h3>
<p>This Website helps students and travellers plan an industrial visit across the different cities in Maharashtra, like Nagpur, Pune, etc. This website also helps you get easy information about companies so you can visit them. Visit in company; students can also enjoy and see the sightseeing places near the industries and across the cities. The Industrial Visit & Tour Planner website is an online platform that provides information for organising and planning industrial visits and tours. It is designed to help educational institutions and individuals plan and organise industrial visits and tours efficiently and effectively. This website provides information about different industries and
```

sectors, including their location, e-mail, phone number, etc. It may also provide information such as the distance from industry and sightseeing places and how much time is needed to travel and see the sightseeing places. </p>

Nagpur

Popularly referred to as the ‘Orange Capital,’ Nagpur is the third largest metropolis in Maharashtra, following Mumbai in Maharashtra, which is second only to Mumbai and Pune. Nagpur is located in the middle of India, and there are plenty of options for the most desirable areas to live in Nagpur. Due to its geographic location, lush greenery, and infrastructure, Nagpur has grown into one of the country’s most lucrative places to invest. Here are the 12 Best Areas To Stay In Nagpur | Best Residential Area In Nagpur.

Aurangabad

Aurangabad laid low through most of the tumultuous history of medieval India and only hit the spotlight when the last Mughal emperor, Aurangzeb, made the city his capital from 1653 to 1707. With the emperor's death came the city's rapid decline, but the brief period of glory saw the building of some fascinating monuments, including Bibi-qa-Maqbara, a Taj Mahal replica, and these continue to draw a steady trickle of visitors. Alongside other historic relics, such as a group of ancient Buddhist caves, these Mughal relics make Aurangabad a good choice for a weekend excursion from Mumbai. But the real reason for traipsing here is because the town is an excellent base for exploring the World Heritage Sites of Ellora and Ajanta.

PUNE

Pune

Pune is the 8th largest metropolis in India. It is in the Indian state of Maharashtra. The city is famous for the great Maratha king Chatrapati Shivaji Maharaj. The game of badminton was invented there in the 19th century. It is also the birthplace of spiritual teacher Meher Baba. Mula and Mutha are the two rivers that flow through the city. Pune is also considered to be the cultural capital of Maharashtra and the educational capital of India. The city is situated to the west of the lush greenery of the Western ghats, surrounded by mountains and hill forts. It has thriving educational, IT, agricultural and manufacturing sectors along with a vibrant nightlife consisting of local & global restaurants, pubs and clubs.

TESTING AND VALIDATION

Testing & Validation Checks

Validation Testing, carried out by QA professionals, is to determine if the system complies with the requirements and performs functions for which it is intended and meets the organization's goals and user needs. This kind of testing is very important, as well as verification testing. Validation is done at the end of the development process and takes place after verification is completed.

Thus, to ensure customer satisfaction, developers apply validation testing. Its goal is to validate and be confident about the product or system and that it fulfils the requirements given by the customer. The acceptance of the software from the end customer is also its part.

When software is tested, the motive is to check the quality regarding the found defects and bugs. When defects and bugs are detected, developers fix them. After that, the software is checked again to make sure no bugs are left. In that way, the software product's quality scales up.

The aim of software testing is to measure the quality of software in terms of a number of defects found in it, the number of tests run and the system covered by the tests. When bugs or defects are found with the help of testing, the bugs are logged and the development team fixes them. Once the bugs are fixed, testing is carried out again to ensure that they are indeed fixed and no new defects have been introduced in the software. With the entire cycle, the quality of the software increases.

Testing Procedure:

Testing phase was included on our project in order to get an idea when the errors located into our project. Testing is vital to the success of the system. System testing makes a logical assumption that if all the parts of the system are correct, the goal will be successfully achieved. Inadequate testing or non-

testing leads to many errors that may not appear until months later. This creates two problems:

- 1) The time lag between the causes and the appearance of the problem (the longer the time interval, the more complicated the problem has become), and
- 2) The effect of the system errors on files and records within the system. A small system error can conceivably explode into a much larger problem.

Testing Techniques:

1. **System Testing:** In our website we have used this particular testing to ensure that the system is working correctly or not. It is a testing in which testing is done to check that by accessing the website in different environment i.e. (in different operating systems) is working or not.
2. **Load Testing:** Load Testing is also known as performance testing which checks the overall performance of the project. In our project we have also used this testing which helps us to check the system's behavior under loads when more than one user is accessing the website simultaneously .
3. **Stress Testing:** This particular testing is conducted to find the performance of the system in peak hours, it raise to how much the system can face. We have done the testing of this project and we have seen that website can work in any condition the only thing for the proper working is the Internet Connectivity .
4. **Documentation Testing:** Documentation Testing is necessary for the project. It relies to find out whatever document supplied are satisfactory or any further document should be supplied in the project .We have done documentation testing, so all the Content which are Written in website is satisfactory fo the user .

Input validation:

Input validation, also known as data validation, is the proper testing of any input supplied by a user or application. Input validation prevents improperly formed data from entering an information system. Because it is difficult to detect a malicious user who is trying to attack software, applications should check and validate all input entered into a system.

Input validation should occur when data is received from an external party, especially if the data is from untrusted sources. Incorrect input validation can lead to injection attacks, memory leakage, and compromised systems.

While input validation can be either white listed or blacklisted, it is preferable to white list data. White listing only passes expected data. In contrast, blacklisting relies on programmers predicting all unexpected data. As a result, programs make mistakes more easily with blacklisting.

**SYSTEM
SECURITY
MEASURES**

System Security Measures

We respect the privacy of individual and will never do anything which will violate the personal space our user . In this project, as of now there is need to provide user personal information. Therefore, there is a proper management of such privacy or security concern related to the personal information of our Users .

Also, we will never disclose the personal information of user such as Phone No. , Email address, Location, etc. The user can trust on us and freely surf through our website. We do not and will never post their projects without their consent.

A system is said to be secure if its resources are used and accessed as intended under all the circumstances, but no system can guarantee absolute security from several of the various threats and unauthorized access.

Security measures will be taken:

- **Strong passwords:**

This first measure is taken that users may used special characters in their passwords and password length must be 8 characters.

- **Confidentiality**

If any users is sharing their personal details in login form it will be secure safely as only users can access such information.

**IMPLEMENTATION,
EVALUATION AND
MAINTENANCE**

Implementation:

The implementation process is easy to carry out if the employees accept the changes in the organization. The process starts with planning for implementation where relationships among various tasks have to be identified and established, schedules for completing all the tasks should be prepared, cost estimates for various tasks have to be drawn up, and a reporting and control system has to be established.

Once the planning is done, the implementation process can be executed smoothly. The steps in the process include: organizing for implementation, developing procedures for implementation, training the users, acquiring hardware and software, developing forms for data collection, developing files for storage of data, testing the system, cutover, and documenting the system.

Implementation is a process of ensuring that the information system is operational.

It involves –

- Constructing a new system from scratch
- Constructing a new system from the existing one.

Implementation allows the users to take over its operation for use and evaluation.

It involves training the users to handle the system and plan for a smooth conversion

Post-Implementation Evaluation Review (PIER): PIER is a tool or standard approach for evaluating the outcome of the project and determines whether the project is producing the expected benefits to the processes, products or services. It enables the user to verify that the project or system has achieved its desired outcome within specified time period and planned cost.

PIER ensures that the project has met its goals by evaluating the development and management processes of the project.

Evaluation:

After the MIS has been operating smoothly for a short period of time, an evaluation of each step in the design and of the final system performance should be made. Evaluation should not be delayed beyond the time when the system's analysts have completed most of the debugging. The longer the delay, the more difficult it will be for designer to remember important details.

The implementation process should be followed by evaluation of the implementation. The MIS can be evaluated for the efficiency with which the allocated resources are utilized in the development/implementation and the effectiveness of its usage after the implementation. Typically, there are challenges galore in implementing the MIS.

The top management's commitment toward the MIS implementation is the strongest defense that can be built up against all these challenges. The top management's support helps the organization to win over the different challenges and problems that can surface during the implementation.

Maintenance:

Maintenance means restoring something to its original conditions. Enhancement means adding, modifying the code to support the changes in the user specification. System maintenance conforms the system to its original requirements and enhancement adds to system capability by incorporating new requirements.

Thus, maintenance changes the existing system, enhancement adds features to the existing system, and development replaces the existing system. It is an important part of system development that includes the activities which corrects

errors in system design and implementation, updates the documents, and tests the data.

Control and maintenance of the system are the responsibilities of the line managers. Control of the systems means the operation of the system as it was designed to operate. Sometimes, well-intentioned people or operators may make unauthorized changes to improve the system, changes that are not approved or documented.

Maintenance is closely related to control. Maintenance is that ongoing activity that keeps the MIS at the highest levels of effectiveness and efficiency within cost constraints. Maintenance is directed towards reducing errors due to design,

Maintenance Types:

System maintenance can be classified into three types –

- **Corrective Maintenance** – Enables user to carry out the repairing and correcting leftover problems.
- **Adaptive Maintenance** – Enables user to replace the functions of the programs.
- **Perfective Maintenance** – Enables user to modify or enhance the programs

according to the users' requirements and changing needs.

FUTURE SCOPE OF THE PROJECT

The future scope of an industrial visit and tour planner website is vast, as it can cater to the needs of various stakeholders, including students, educational institutions, industries, and tour operators. Here are some potential areas of growth and development for such a website in the future:

- ❖ **Enhanced User Experience:** Websites can leverage emerging technologies such as virtual reality (VR) and augmented reality (AR) to provide an immersive and interactive experience for users. Students and educators can virtually explore industrial facilities, gain practical knowledge through simulations, and engage in interactive learning activities.
- ❖ **Personalized Recommendations:** Websites can use data analytics and machine learning algorithms to analyze user preferences and behavior, and provide personalized recommendations for industrial visits and tours based on their interests, educational levels, and geographic locations. This can help optimize the planning process and enhance user satisfaction.
- ❖ **Collaboration with Industries and Educational Institutions:** Websites can forge strategic partnerships with industries and educational institutions to offer exclusive access to industrial facilities, specialized training programs, and industry experts. This can add value to the industrial visit experience and attract more users.
- ❖ **Booking and Payment Integration:** Websites can integrate seamless booking and payment options, allowing users to easily book industrial visits, make payments, and manage their bookings online. This can streamline the planning process and provide a convenient and secure user experience.
- ❖ **Social Media Integration:** Websites can leverage social media platforms to create communities and engage with users, allowing them to share their experiences, reviews, and feedback. This can help build a strong online presence and create a loyal user base.

CONCLUSION

Conclusion:

Our project is to design a Industrial Visit and Tour Planner website and the main language we used is HTML. With the help of this language, we created a Website. As a student, while working on this project, we got many challenges like facing an error, but because of teamwork, we were successful in completing this project.

In conclusion, an industrial visit and tour planner website has significant potential in the future. By leveraging technology, personalization, collaborations, and sustainability, such websites can enhance the user experience, streamline the planning process, and create value for students, educational institutions, and industries.

With the potential for virtual reality, augmented reality, data analytics, machine learning, and social media integration, industrial visit and tour planner websites can offer innovative and immersive experiences, expand to global markets, and contribute to responsible tourism practices. The future looks promising for the growth and development of industrial visit and tour planner websites, as they continue to evolve and adapt to the changing needs and preferences of users in the education and travel sectors.

2022-2023

1.Introduction:

Our Project Title is “Industrial Visit and Tour Planner as the name suggest it will the students and travelers planning their industry visit across different cities in the Maharashtra State.This Project will help them in planning a budget friendly trip.

This will not only help them in planning a industrial visit but also suggest them different sightseeing places near the industries and across the cities. This Website will tell the visitors about the history related to the monuments and the city.

2. Objectives of the project:

- This Website will help to students to find out information about industries.
- The purpose of creating this website is to make the industrial visits and tours budget friendly.
- This website will help students to find out information about the cities in a very easy and clear way.
- The website will also promote learning and can help students in future education.
- This website will help students to get knowledge about how to plan industrial visit and tour effectively.

3. Project Category: Information Website

4. Tools/ Platform/ Languages to be used: Visual Studio Code

HTML, CSS, PHP(MYSQL)

5. Scope of future application:

- This website will provide information about the industries and will promote students to visit industries to understand how an industry works.
- This website will help them to plan a budget friendly tour without any unnecessary commissions charged by the tour planners.
- Website will be very helpful to plan immediate tours in a very efficient way.
- Website will organize the tour in a very easy and simple way.
