ACKNOWLEDGEMENT

We take this opportunity to express our deep gratitude and whole hearted thanks to project guide Prof. Pravin Yadao, Coordinator for his guidance throughout this work. We are very much thankful to him for his constant encouragement, support and kindness.

We are also grateful to our teachers Prof. Rahul Tiwari, Prof. Sushma Gawande, Prof. Preeti Rangari, Prof. Prajkta Deshpande and Prof. Haresh Naringe for their encouragement, help and support from time to time.

We also wish to express our sincere thanks to Principal Dr. S.S. Kathaley for providing us wide range of opportunities, facilities and inspiration to gather professional knowledge and material without which this project could not have been completed.

Harsh Gahlot

Introduction

1) Introduction:

This Education blogging websites are platforms that allow users to publish and share content related to education, including news, tips, opinions, research, and resources. These websites often have a community of educators, students, and education enthusiasts who share their expertise and insights with one another

This project is aimed at developing a website that depicts all the information about the course BCCA of G.S. College Nagpur (Subject Offered, Lecturers, Fees, Academic calendar etc) and developing all information related to the events, industrial trips that happened between the session 2018-22.

Our HTML Website is designed to provide information to our juniors and other students about our departmental events which held previously and provide information about BCCA UG degree course in user-friendly and efficient manner. The website allows students to take look and understand the teaching culture of our BCCA department through a representation of the various events which held like FRESHERS, NOSTALGIA, INDUSTRIAL TOUR and much more.

A college events website is a platform that provides information about upcoming events at a college or university. These websites serve as a hub for students, faculty, staff, and the community to learn about and participate in various events and activities happening on campus.

The primary audience for college events websites is the college community, including students, faculty, and staff, who use the platform to find and participate in events of interest. Their website may also be used by members of the broader community who are interested in attending events at the college or university.

In addition to promoting events, college events websites can also serve as a platform for building community and fostering engagement among students, faculty, staff, and the broader community. As such, they have become an essential tool for colleges and universities looking to enhance campus life and promote brand.

The website is written in HTML, CSS and JavaScript. We use the HyperText Markup Language is standard markup language for document design to be display in web browser often assisted by technologies such as Cascading Style Sheet (CSS) and scripting language such as JavaScript. We develop this website using below technology:-

HTML:- Page layout has been designed in HTML. CSS:- CSS has been used for all the designing part. JavaScript:- All the validation task and animations has been developed by JavaScript.

OBJECTIVES

2) **Objectives:**

- This website help students to find information about BCCA course and its scopes infuture.
- It is designed in such a way that one can easily get the information about the events thathappened and can also download the image of the events and industrial trips.
- This website help in easy maintaning and updating information in the website for theadministrator.
- Quick summarizing of the previous events for enhancing the ideas and make future events more attractive
- It manages all the information about College, Events, Industrial Tour.
- The project is totally built at administrative end and thus only the administrator isguaranteed the access.
- The purpose of the project is to build an website to reduce the manual work managing thedifferent events of the department. Its gives all the information abouts events

PRELIMINARY SYSTEM ANALYSIS

3) Preliminary System Analysis:

3.1) Preliminary Investigation

This project is aimed at developing a website that depicts all the information about the course BCCA of G.S. College Nagpur (Subject Offered, Lecturer, Fees, Academic calendar etc) and developing all information related to the events, industrial trips that happened between the session 2018-22.

3.2) Present System in Use:

Currently, individuals or students rely on manual maintaining or recording of the events image or information related to the departmental events. While this manual maintenance required lots of storage and all of the students can not access them.

3.3) Flaws in Present System:

The flaws in the present system is not that much but only the flaw is all the student cannot get the full or enough information about the Department which we are tried to provide it all in the finger tip.

3.4) Need Of New System:

The need for a new system arises from the flaws in the present system. In old system there is no particular website which show the full information of BCCA department of our college. Not all the information of department can not shown in official website of college

3.5) Feasibility Study

A feasibility study was conducted to assess the viability of the project. The study evaluated the technical, operational, economic, and legal feasibility of developing a website. It was determined that the project is technically feasible, as the necessary skills and resources are available to develop the program. Additionally, the program is operationally feasible, as it can be easily integrated into the user's workflow. From an economic standpoint, the program is cost-effective and offers significant benefits to its users. Finally, the program is legally feasible, as there are no legal barriers to developing and distributing the program.

3.6) Project Category:

The project falls under the category of Blogging website, as it aims to provide department information to students and juniors more efficiently and accurately. This project logic is developed using HTML, CSS and JavaScript.

3.7) PROGRAMMING LANGUAGE USED IN PROJECT HTML (Hyper Text Markup Language)

HyperText Markup Language is standard markup language for document design to be displayed in web browser often assisted by technologies such as Cascading Style Sheet (CSS) and scripting language such as JavaScript.

History of HTML

HTML is a very evolving markup language and has evolved with various versions updating. Long before its revised standards and specifications are carried in, each version has allowed its user to create web pages in a much easier and prettier way and make sites very efficient.

- HTML 1.0 was released in 1993 with the intention of sharing information that can be readable and accessible via web browsers. But not many of the developers were involved in creating websites. So the language was also not growing.
- Then comes HTML 2.0, published in 1995, which contains all the features of HTML 1.0 along with a few additional features, which remained the standard markup language for designing and creating websites until January 1997 and refined various core features of HTML.
- Then comes HTML 3.0, where [Dave Raggett](#) introduced a fresh paper or draft on HTML. It included improved new features of HTML, giving more powerful characteristics for webmasters in designing web pages. But these powerful features of the new HTML slowed down the browser in applying further improvements.
- Then comes HTML 4.01, which is widely used and was a successful version of HTML before HTML 5.0, which is currently released and used worldwide. HTML 5 can be said for an extended version of HTML 4.01, which was published in the year 2012.

HTML features include –

- Simple and user-friendly:- Tags are annotations that can be used to write HTML. Tags structure HTML and make it easier for people and browsers to read the content efficiently. They also allow a browser to add CSS (Cascading StyleSheets) to the digital document, resulting in a stunning visual combination.
- Semantic Structure:- This is one of the most awaited features of HTML. HTML5 includes several tags for annotating certain elements for their specialized uses. For example, the <article> tag is used to annotate page content. The <aside> tag represents content that is indirectly related to the major content of the document.
- SEO - Search Engine Optimisation:- SEO is by far the most important USP (Unique Selling Point) of HTML5. With the introduction of search engines such as Google, Yahoo!, DuckDuckGo, and others, you literally have a wealth of knowledge at your fingertips.
- Local Storage & IndexedDB:- Client-Side Data Storage:-HTML5 brings significant improvements in client-side storage capabilities. LocalStorage and sessionStorage are important technologies in allowing developers to save data on the client side. These are critical developments in browser storage capabilities because cookies limit data storage size on the client side
- Offline Capabilities (PWA) with Cache API & Service Workers:- Consider creating a web application that operates even when the user's internet connection is down. You don't have to imagine it because, with the introduction of Service Workers, IndexedDB, and Cache API, you might make it a reality. Your web application could provide your users with a native-like experience. Many applications, such as Flipkart, already do this, and it's known as a PWA (Progressive Web Application).
- Platform Independent:- HTML runs via a browser, which may be found on almost every device with a basic operating system. If you used mobile phones before smartphones, you'd know that even outdated Nokia phones running SymbianOS that could open HTML pages.

List of why HTML is popular:

- **Easy to Learn:** HTML is relatively easy to learn compared to other programming languages. It has a simple syntax and requires no prior programming knowledge, making it accessible to beginners.
- **Widely Supported:** HTML is supported by all web browsers, which means that websites built with HTML can be viewed on any device with an internet connection.
- **Versatility:** HTML can be used to create a wide range of web content, from basic text and images to complex forms, tables, and multimedia.
- **Interactivity:** HTML supports interactive features such as buttons, links, and forms, allowing users to interact with web content and provide feedback.
- **Search Engine Optimization (SEO):** HTML provides a structure and hierarchy for web content, which can help search engines understand the content and improve search engine rankings.
- **Compatibility with Other Technologies:** HTML can be easily integrated with other web technologies such as CSS and JavaScript, which allows developers to create more dynamic and interactive web content.
- **Standardization:** HTML is a standardized language, which means that web developers can rely on consistent behavior across different platforms and devices.
- **Accessibility:** HTML supports accessibility features such as alt tags for images and captions for videos, which helps to ensure that web content is accessible to users with disabilities.

**Software & Hardware
Requirement
Specifications**

Software & Hardware Requirement Specifications

Every application needs the software in which it has to be executed and a hardware the application is going to perform its function. Some application cannot run on every platform and some applications needs some specific requirement in the software or in hardware to get operated. Let's take an example of the applications which cannot be run on every platform like windows, android, Linux, etc. Applications made in visual basic is only supported for the windows, one cannot access these applications from themobile phones, etc. So, here are some hardware and software specifications which are mandatory for the application to get operated.

Software Requirement:

Language: HTML

➤ Database: Ms-Access

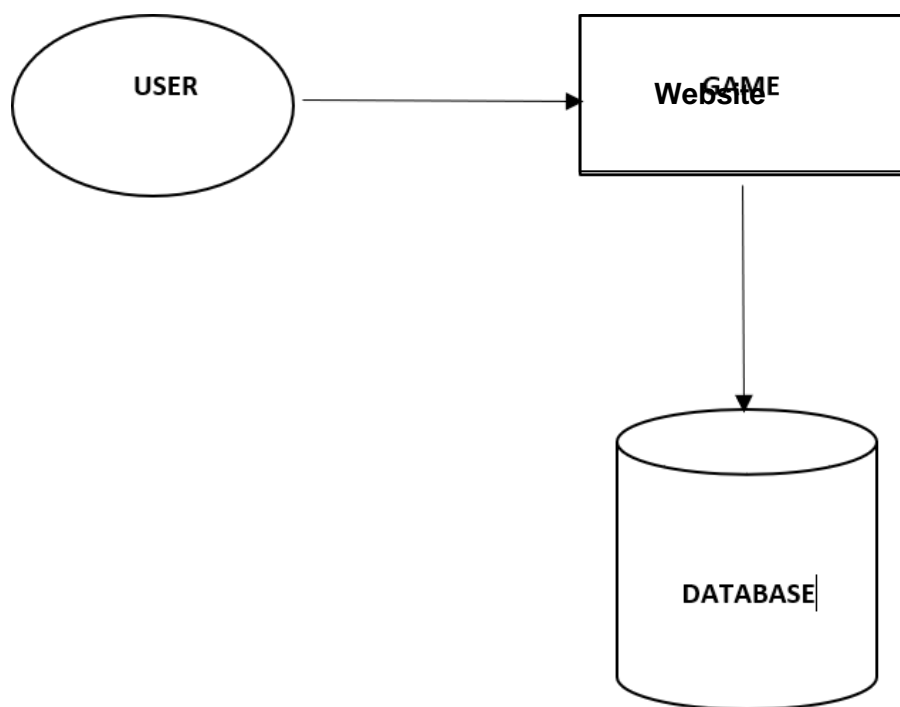

➤ Operating System: Windows XP Professional, windows 7, windows 8.(Resolution – 1024 by 768 pixels).

Hardware Requirement:

Processor: The software can run on any processor with a speed of 1 GHz or higher. RAM: The minimum required RAM for the software is 2 GB, although 4 GB or more is recommended for optimal performance.

Storage: The software requires approximately 100 MB of free storage space on the hard drive.

Enhance Your Future With GS COLLEGE

Govindram Seksaria College of Commerce and Economics, Nagpur was established in 1945 by Shiksha Mandal, Wardha to fulfill the requirement of Commerce education in the region during the pre-Independence period. It is the first Commerce College in the city of Nagpur and only the second in Nagpur University; the first being G. S. College of Commerce, Wardha. Having been set on course by such noted Gandhians and freedom fighters as Shri Jamnalal Bajaj and Shri Krishndas Jajoo, who founded Shiksha Mandal, the college continued to receive patronage by Seth Govindaram Seksaria, Shri Kamlnayanji Bajaj, Shri Ramkrishnaji Bajaj and host of other noble souls who shaped our existence from time to time.

Enhance Your Future With GS COLLEGE

Govindram Seksaria College of Commerce and Economics, Nagpur was established in 1945 by Shiksha Mandal, Wardha to fulfill the requirement of Commerce education in the region during the pre-Independence period. It is the first Commerce College in the city of Nagpur and only the second in Nagpur University; the first being G. S. College of Commerce, Wardha. Having been set on course by such noted Gandhians and freedom fighters as Shri Jamnalal Bajaj and Shri Krishndas Jajoo, who founded Shiksha Mandal, the college continued to receive patronage by Seth Govindaram Seksaria, Shri Kamlnayanji Bajaj, Shri Ramkrishnaji Bajaj and host of other noble souls who shaped our existence from time to time.

Testing and Validation Check

Testing and Validation Check

Validation is nothing but the security measures taken at the time of the execution of any program. It is necessary for the analyst to take the validation in their project as it provides more accuracy and systematic flow to project. Validation not only stops input of the false data but also provides the information in the form of message to the user clearly warn the user to input correct data type. Hence it plays an important role of a guide during input of data.

Validation put it controls over the data in both character as well as integer data type. Whenever wrong data or invalid data is stored by the user it frees the message immediately.

- Validation input transaction:

Validation input data is largely done through software which is the programmer's responsibility but it is important that system analyst must know that common program might invalidate a transaction. Business committed to quality will include validation checks as a part of their routine software.

Implementation

Evaluation and

Maintenance

Implementation, evaluation and Maintenance

Implementation phase is mainly concerned with the user training, site, and preparation and file conversion. It also involves final testing of the system.

During implementation the component built during development are put into optional use.

Following are the points should be considered while doing implementation of the application:

- Testing, debugging and documentation program.
- Converting data from old to new system.
- Giving training to the user about how to operate the system.
- Developing operating procedures for the computer operating staff.
- Establishing a maintenance procedure to repair and enhance system.
- Completing Documentation
- Operating system on the user location and solving all the issues occurred while operation.

Evaluation

After the implementation phase, another stage in project development is evaluation. After keeping the project in the working condition for some time, all the errors that are shown in the computer program should be removed. The programmer needs to correct them so that same errors should not be repeated. We should also get the feedback from the user which are using it and ask them whether, it is user friendly or not. After evaluating the program and satisfying the needs of the user the program is maintained fully to give the same functionalities for what it was intended to be. This stage should be implemented so as to regular check-up the errors with error handling techniques. This stage is the updating and correcting of the program to account for changing condition or field experience. Proper testing and Documentations significantly reduce the frequency and extent of the required maintenance.

Future scope of the project

Future scope of the project

- This website will reduce the manual operation to maintain all the information about the course and events.
- And students can also generate various ideas for organizing future events.
- Main concept of the project is to students get informative about the course and one click access or easy access of the departmental events.
- This website will be handed over to the juniors for maintaining their academic events.

Conclusion

Conclusion

The BCCA Departmental Events created using HTML CSS and JavaScript has proven to be a useful website for anyone who needs to access or collect information about departmental events and information related to this. With its user-friendly interface users (students) can get all the necessary information which they want.

The project utilizes the powerful capabilities of the CSS and JavaScript which provide a smooth and responsive experience to the user. It is an excellent example of how a responsive and designed website can be developed using HTML CSS and JavaScript that make the website most efficient and user-friendly.

Overall, the BCCA Departmental Events website project provides valuable information to the students, teachers, and juniors who want to take a look at the information about the various events and industrial trips which are held in the department.

Bibliography & References

Bibliography:

Deepak Chouksey.

(2023).References:

- <https://www.scaler.com/topics/features-of-html/>
- <https://www.w3schools.com/>
- <https://stackoverflow.com/>

By utilizing these references, we able to create a well-designed and functional application that give wide range of information to the students. These references provided me a solid foundation of knowledge and resources to create a quality website.

A
PROJECT SYNOPSIS
ON
“BCCA DEPARTMENTAL EVENTS”

Submitted to

**G. S. COLLEGE OF COMMERCE & ECONOMICS, NAGPUR
AUTONOMOUS**
In the Partial Fulfillment of

B.Com. (Computer Application) Final Year

Synopsis Submitted by
Harsh Gahlot
Deepak Chouksey

Under the Guidance of
Pravin J. Yadao

Shiksha Mandal's
**G. S. COLLEGE OF COMMERCE & ECONOMICS, NAGPUR
AUTONOMOUS**
2022-2023

1. Introduction

This project is aimed at developing a website that depicts all the information about the course BCCA of G.S. College Nagpur (Subject Offered, Lecturers, Fees, Academic calendar etc) and developing all information related to the events, industrial trips that happened between the session 2018-22.

2. Objectives of the project:

- This website help students to find information about BCCA course and its scopes in future.
- It is designed in such a way that one can easily get the information about the events that happened and can also download the image of the events and industrial trips.
- This website help in easy maintaining and updating information in the website for the administrator.
- Quick summarizing of the previous events for enhancing the ideas and make future events more attractive.

3. Project Category: HTML Website

4. Tools/ Platform/ Languages to be used: HTML CSS and Javascript

5. Scope of future application:

- This website will reduce the manual operation to maintain all the information about the course and events.
- And students can also generate various ideas for organizing future events.
- Main concept of the project is to students get informative about the course and one click access or easy access of the departmental events.
- This website will handed over to the juniors for maintaining their academic events.
